

International roaming for cheap

Airtel has announced its new plan pack, the Airtel World Pack. Prices start as low as ₹649. <https://dgit.in/dec22-09>

More useful than ever!

Truecaller is launching a directory that lets users find verified government contacts within the app. <https://dgit.in/dec22-10>

thought we'd create a very simple game where, let's say, you want to make French fries. You need cooking oil, potatoes and salt, right? So we created a game where you need to collect these ingredients as NFTs. When you collect all the ingredients, you can go to the kitchen and cook up the french fries. So we'll take away these ingredients from you and we'll give you the French fries NFT. That is how we started.

Then the question became, what do you do with these french fries? Why are you making this? So we created more layers where we have a playground where you can use these NFTs to run food truck wars. You can run your food truck and you can play against other players to earn money for your food truck or partnering with other brands where, let's say, if you have a OneRare coffee NFT, you can come to this coffee shop and swap it for a real coffee as well. So we kind of have been growing our project every month in the scope, but we started as a very small NFT game. We thought that gaming is how people can understand it.

4 So you have gamers engaged in a food-based Web 3 game, and you're kind of trying to push them towards these restaurants?

Supreet Raju: I think, for us, the idea is to attract the foodie community. When you look at people in a restaurant, everybody has different tastes, different styles and different desires. Even when we use Instagram, for example, I use it as a viewer. Somebody else is using it as their actual career option. So when you use any particular product, there are different needs to be met. Similarly, when we're creating this foodverse of ours, there is an attractive feature for the gamers. There is an attractive feature for virtual restaurants and ordering. There is an attractive feature for live events like hosting a master chef in the metaverse, so it would be different audiences. The idea is not to encourage the gamer to start ordering food, the idea is to create a better tool.

For the virtual restaurant, let's say, you decide that you want to

order something from a new place. You would go to Google reviews and maybe check out which places are close to your location. You'll go to their Instagram or you'll go to Zomato, you'll place that order, and then you'll go to the banking app to pay for it. Somebody will call you, contact you, give you the order, you may go review it tomorrow. So there is an entire process where we use a lot of things in

Vicky Ratnani's NFT

our phone to get to food. That is pretty much what we are putting in the foodverse. You can walk into this restaurant virtually, through the foodverse, check out how the restaurant looks, check out the dish you're ordering, all in 3-D. You can go and even put your burger together in the foodverse as per your liking and the restaurant will make the same burger for you. So it's just the idea of improving your virtual
