Is Generative AI coming for your job?

These tools have caused many to wonder – will AI replace humans in the workplace?

Kajoli Anand Puri |
feedback@digit.in

A

I is a powerful tool that can be used to automate many tasks, but it cannot replace human

writers. This is because AI lacks the ability to understand and express complex ideas, emotions, and creativity in the same way that humans can. Human writers have the ability to think deeply and critically

about their subject matter, and to convey their thoughts and feelings through the written word in a way that resonates with readers. AI, on the other hand, is limited by the data and algorithms it has been trained on and is unable to improvise or adapt to new situations in the same way that humans can. Additionally, AI lacks the unique perspective and experiences that human writers bring to their work, which is essential for creating engaging and relatable content. In short, while AI can be a useful tool for writers, it cannot replace the creativity and originality of human writers.

But, what if we told you that the introduction you just read was written by OpenAI's ChatGPT?

Ever since OpenAI made its chatbot available to the masses (as a free-to-use release) we've been hearing a lot of chatter about

ChatGPT and its undeniably vast real-world applications. Touted as the most advanced AI-based chatbot we've ever seen, ChatGPT uses Generative Pretrained Transformer 3 (GPT-3) to offer human-like responses to your queries. The AI-bot is based on a language learning model that's been fed over 576GB of data about the world to understand (and subsequently, explain) a host of concepts. As long as its applications are rooted in language, the bot can help humans accomplish almost any task. Be it writing complex code to create an Instagram-like application, a review of the Apple iPhone, or even writing Draco/Hermione fanfiction (yes, that happened).

The collective thrill over the possibility of living in a world where your literal job can be automated caused Sam Altman, the CEO of OpenAI to respond by saying "The
