

Premium Phone (Over ₹50K)

Powerhouse of performance

2022 was an interesting year for the smartphone industry. After a difficult 2021, we saw the major players shift focus from fixing supply chain issues and go back to what they do best – innovate. As a result, we saw a number of interesting phones launched throughout the year, with many of them pushing the boundaries of smartphone technology. This was particularly true for the premium segment of the market. We saw strong offerings which made it very difficult for us to recommend just one phone from the segment. But as always, there's has to be a winner. So read on to find out which phone won the winner's title.

Zero1 Winner: iPhone 14 Pro Max

Apple's latest and greatest, the iPhone 14 Pro Max is the company's current flagship which flaunts the best Apple and, arguably, the industry has to offer in terms of mobile phone technology. Built around Apple's new in-house A16 Bionic SoC with a 6 core CPU and a 16-core Neural Engine, the iPhone 14

Pro Max stood tall in our Zero1 performance testing to emerge as the most powerful phone in the premium segment. The device also offers increased brightness over its predecessor, and also gets Apple's ProMotion 120Hz refresh rate feature. Then there's also an improved camera system, good battery life, long software support, a stunning display, and a strong ecosystem, which makes the Apple iPhone 14 Pro Max not only one of the fastest phones in the market, but also one of the most well-rounded devices in 2022.

Runner-up: vivo X80 Pro

The Vivo X80 Pro is Vivo's most premium phone to date. However, it's the hardware under the hood that helped it emerge as the second-fastest phone in our Zero1 testing. Powered by the

Snapdragon 8 Gen 1 SoC, the Vivo X80 Pro proved to be more than adequate for anything and everything we threw at it. However, that's not all you get with the Vivo X80 Pro. It is a premium phone with the best camera phones around at the moment. At the heart of its camera performance, is the 50-megapixel Samsung ISOCELL GNV primary sensor. The Vivo X80 Pro also promises good battery life using a 4,700mAh pack that supports 80W Flash Charge and 50W wireless charging.

Best Buy: Samsung Galaxy Z Fold 4

While not the most affordable phone in the list, the Galaxy Z Fold 4 still managed to emerge as the most value for money offering in the premium segment as it brings to the table a lot of interesting features and powerful hardware for the money being asked for it. The Galaxy Z Fold 4 acts as more than just the company's flagship productivity device, as it offers major upgrades over its predecessors in the camera and performance department. Its biggest selling point is the fact that the Galaxy Z Fold 4 comes with a 7.6-inch foldable AMOLED panel. All these combined make the Galaxy Z Fold 4, arguably, the best foldable phone in the market.
