

Mid-Range Phone (₹20K to ₹35K)

Best shouldn't be expensive

Mid-range smartphones are, in many ways, some of the most complete devices out there, offering a good mix of premium features and performance, but at a non-premium price. While it is true that what we pay for mid-range smartphones has gone up in recent years, the level of performance we get has also increased, and at a much faster rate. Under ₹35,000, there are a bunch of great smartphones that offer everything a user would require. After a nail-biting encounter among eight nominees, only one mid-ranger was able to emerge the winner.

Winner: Realme GT2

The Realme GT2 launched as the smaller sibling of the company's Realme GT2 Pro flagship smartphone. It comes with a flagship-level Qualcomm Snapdragon 888 chipset, with a max clocking speed of 2.82GHz. The octa-core chipset on the Realme GT2 is paired with up to 12GB of RAM, making the Realme GT2 a beast of a performer. Despite its flagship-level specs, the Realme GT2 marginally

beat our runner-up for the mid-range category this year. Apart from the 5nm Snapdragon 888 chipset, the Realme GT2 also comes with a nice 6.62-inch AMOLED display with support for HDR10+ and a 120Hz refresh rate. The phone outperformed all other nominees in the category like the OnePlus 10R, the Redmi K50i, iQoo Neo 6, and more such devices that are known to come with a power-packed experience.

Runner-up and Best Buy: OnePlus 10R

The OnePlus 10R came second in our mid-range test, losing out to the Realme GT2 by the slimmest-possible margin. The OnePlus 10R, powered by MediaTek's Dimensity 8100 Max, showed a good mix of performance and specs. In our tests, the OnePlus 10R

aced all the CPU and GPU tests, and the smartphone also tested well in the battery department. The 5nm MediaTek Dimensity 8100-Max chipset that powers the OnePlus 10R has a maximum clocking speed of 2.85GHz, which gave the OnePlus 10R enough power to emerge as the runner-up, falling just short of the winner. Not just that, the OnePlus 10R also bagged the Best Buy award in the mid-range category. It has a good mix of performance, specs and features, build and design, and more. Not only does it have a solid AMOLED display, but the battery life and performance is also excellent, giving the OnePlus 10R enough of a push to become the Best Buy mid-range smartphone for this year.

2nd Runner-up: iQoo 9 SE

The iQoo 9 SE, which also comes with a flagship-level Snapdragon 888 chipset, was marginally beaten out by the OnePlus 10R, our runner-up for this year's Zero1 award. The iQoo 9 SE, apart from the 5nm Snapdragon 888 chipset, also comes with a 6.62-inch super AMOLED display with a 120Hz refresh rate. Overall, after a promising test result and nail-biting competition, the iQoo 9 SE bagged the second runner-up spot.
