

Mid-range smartphone cameras in 2022 are more versatile than ever before. While manufacturers do cut corners, the primary cameras in the ₹25K-35K price range are usually solid performers in daylight. In 2022, the democratisation of “premium” camera features continued, with a lot of these features trickling down to the mid-range segment. Be it higher megapixel counts, capable Night Modes, 4K or even 8K video recording, impressive computational photography, ultra stable video, and more, mid-range cameras are slowly but surely incorporating them all. With that, let’s find out the Digit Zero1 Award winner in the best camera phone (under ₹35K) category.

Winner: **OnePlus 10R**

The OnePlus 10R is one of the most holistic mid-range phones in 2022 with impressive camera capabilities. The phone’s primary 50 MP Sony IMX766 lens with OIS (Optical Image

Stabilisation) impresses with crisp and detailed shots in daylight. The ultrawide sensor is one of the better ones in this price range and the 16 MP selfie camera clicks good pictures with oodles of detail in daylight. OnePlus 10R’s primary camera takes consistently detailed shots in low-light.

Images shot in low-light are surprisingly bright and sharp while keeping noise at bay. 4K video recording comes with detail and sharpness, but it can be quite shaky. Videos shot at 1080p are well stabilised. Overall, this is a great mid-range camera system that primarily shines due to its excellent primary shooter.

Runner-up and Best Buy: **Realme 9 Pro+**

While the OnePlus 10R only margin-

DIGIT BEST BUY WINNER-2022

Realme 9 Pro+
Price: ₹24,999

ally beat the Realme 9 Pro+ in our camera tests, the price difference between these two phones is not so marginal. Priced at a whopping ₹10K lower than the winner, the Realme 9 Pro+ is easily one of the best value-for-money camera phones on the market. The phone features the same Sony IMX766 sensor that’s present in the OnePlus 10R, so it takes equally detailed and crisp 12.5 MP binned shots from the primary lens, but the colour tuning is a bit more aggressive. Depending on your preferences, you may like or dislike this high contrast look in comparison to the OnePlus 10R, but we cannot deny the quality of the pictures coming out of this phone’s primary camera. Portrait photos come out looking sharp as well with good edge detection and dynamic range. Even the 8 MP ultrawide camera produces surprisingly usable shots with great dynamic range in daylight, however, the macro lens is nothing to write home about. The ultrawide lens on this phone is possibly the best one at under ₹25K since you get consistent and sharp results in most scenarios. OIS on the main camera also ensures pretty good low-light shots, however, video recording at nighttime brings up noisy results. The 16 MP selfie camera isn’t as refined as the one used on the OnePlus 10R, but still puts out shots with good dynamic range and colour but softer details. Nevertheless, this is a solid mid-range camera phone that provides more than enough bang for your buck and is deserving of the Best Buy Award!
