

The landscape of the gaming industry has changed dramatically over the last few years. From primarily being a console and PC-driven space, games now have started finding space on smaller smartphone screens. This year, we saw only a handful of dedicated gaming phones make it to the country. By a dedicated gaming phone, we mean a phone that's been designed and tuned to run games on a high refresh rate screen with enhancements like high touch response rate, game mode, thermal management system, RGB shenanigans and more. These phones are known for providing top-of-the-line features and sustained performance that can take on the most demanding of titles without breaking a sweat. Let's find out which phone wins.

Winner: iQOO 9T

The iQOO 9T emerged as the winner of the Best Performing Gaming Phone of 2022 category based on majorly one factor: its ability to effectively handle the tricky Snapdragon 8+ Gen

Realme GT 2 Pro
Price: ₹49,999

1. In our tests, it blazed past competing phones. Its performance in benchmarks and games was second to none. This SoC paired with the Vivo V1+ chip, helped the iQOO 9T run games at higher frame rates for longer, thus not only helping with battery life, but also improved thermal performance. The presence of a dedicated game mode and a high PPI display further make this phone a worthy winner for our coveted Digit Zero1 performance award.

Runner-up: Realme GT 2 Pro

The runner-up title in this category

goes to the Realme GT 2 Pro which edged the OnePlus 10T marginally. It is, arguably, one of the few phones to have handled the Snapdragon 8 Gen 1 right, and in the process clock high scores in benchmarks and sustained performance in games. In our time with it, we found the Realme GT 2 Pro to be a device that can handle demanding games like BGMI at the highest graphics and FPS preset. And that too without heating up much. The latter thanks to the phone's use of a stainless steel vapour cooling chamber which offers a large cooling surface for quick heat dissipation. On the outside, the device's ergonomic design only added to improving gaming experiences on the device. Overall, all this combined make Realme GT 2 Pro a brilliant phone to play games on.

DIGIT BEST BUY WINNER-2022

OnePlus 10T
Price: ₹49,999

Best Buy: OnePlus 10T

The winner of the Best Buy Award for the gaming phone category this year goes to the OnePlus 10T. It offers very good performance in apps of daily use as well as graphics-intensive games. Backed by the Snapdragon 8+ Gen 1 SoC, this phone is amongst the most powerful smartphones in the market right now. However, what makes it a very good buy is the fact that it offers a lot more than just powerful core hardware. From cameras, display to design, the OnePlus 10T doesn't disappoint. Everything brought together makes this a very compelling choice. Additionally, the phone is also available at an aggressive price point, helping it offer great bang for your buck.
