

Tablet

Larger screen, bigger performance

Tablets are usually not as popular as smartphones or laptops. However, with the past two years shifting the focus on remote work and study, tablets have emerged as one of the primary machines for work and play for many. Tablets these days offer enough computing power to handle all kinds of tasks. With the ease of using stylus and pencils, paired with responsive AMOLED displays make tablets the preferred device for those in the creative fields. A space dominated by only a few brands like Apple and Samsung, this year we saw several new tablet launches in India. One tablet emerged the winner for this year's Digit Zero1 Award for the best tablet in India.

Winner: Apple iPad Air 2022

The 2022 iPad Air was launched earlier this year with the Apple M1 chip. As expected, the might of the M1 chip helped the Apple iPad Air dominate the performance tests and emerge as the winner, amid a tough fight with its closest rival, the Samsung Galaxy Tab S8 Ultra. The iPad Air comes with a 10.9-inch Liquid Retina LCD display with up to 500 nits of peak brightness. Further, there is a 12-megapixel rear camera and a 12-megapixel front shooter for video calls. Overall, the Apple iPad Air 2022 delivered on all aspects, and

became winner for this year's Zero1 Award by a margin.

Runner-up and Best Buy: Samsung Galaxy Tab S8 Ultra

Samsung's Galaxy Tab S8 Ultra, which is the most powerful Android tablet in the market currently, came a close second to the iPad Air. The Samsung Galaxy Tab S8 Ultra, with its massive 14.6-inch Super AMOLED display offers a super-immersive experience for both entertainment and design purposes. The tablet is powered by a Qualcomm Snapdragon 8 Gen 1 chipset paired with 12GB of RAM, giving the Galaxy Tab S8 Ultra enough power to hold its own, even against higher-level chips like the Apple M1. The Samsung Galaxy Tab S8 Ultra is also this year's Best Buy winner. With the powerful Snapdragon 8 Gen 1 chipset with

ample RAM (12GB) and a beautiful display helped the Samsung Galaxy Tab S8 Ultra bag this year's Best Buy award. The Galaxy Tab S8 Ultra's size, however, goes against the whole idea of portability. It is too big to get any kind of good grip on, and the size doesn't give the user any confidence while holding the tablet without any kind of protection. However, where the portability lacks, the performance more than makes up for it.

2nd Runner-up: Xiaomi Pad 5

The Xiaomi Pad 5, a much-liked tablet this year, is our second runner up for the Digit Zero1 category for the best tablet. The Xiaomi Pad 5, which was launched to many positive reviews, held its own in a fight against some of the biggest, most powerful tablets in the market currently. The Xiaomi Pad 5 was launched with a Qualcomm Snapdragon 860 chipset paired with 6 GB of LPDDR4X RAM and up to 256 GB UFS 3.1 storage. The Xiaomi Pad 5 also has a very good quality WQHD+ display with a 120Hz refresh rate, making it the cheapest tablet to have this kind of a premium display. The Xiaomi Pad 5, however, wasn't able to outperform the bigger tablets it was going up against, like the Apple iPad or the Samsung Galaxy Tab S8 Ultra.
