

Gaming Laptops

The stuff of dreams

The absolute best gaming laptops that money can buy, that's what you get in this segment. The laptops in this category push the limits. They come with the absolute best specs money can buy and you can be sure that they will shred through just about any task you set to do on them. Our Digit Zero1 Award winner for the best gaming laptop was in a league of its own, and the difference in performance between the two runner ups, was in mere decimal points. Let's get started with the winner!

Winner: MSI Raider GE67 HX (12UHS)

The MSI Raider GE67 HX is a monster of a machine which comes with a 12th gen Intel core i9-12900HX which has even desktop variants beat, an NVIDIA RTX 3080Ti, 32GB of DDR5 RAM, a 15.6-inch Quad HD display with a refresh rate of 240Hz, 2TB of NVMe SSD storage and more. The Raider GE67 crushed the competition when it came to the CPU benchmarks, the difference in performance between the HX and H variants is quite evident; the HX even had the i9 K variant beat for that matter. The Raider GE67 had all other laptops in the segment beat

MSI Raider GE67 HX (12UHS)

Price: ₹2,79,990

in both the synthetic and real world gaming benchmarks as well. None of the games we tested ever fell below the 100 FPS mark on high settings at FHD. Games like Valorant can fully utilise the 240Hz refresh rate panel, recording well over 300 FPS consistently. The MSI Raider GE67 HX is without a doubt, our Digit Zero1 Award Winner for the best performing gaming laptop.

Runner-up: Alienware M15 R7

The Alienware M15 R7 happened to be a runner up in the 121K - 200K gaming laptop segment, however, the variant in this category comes with an NVIDIA RTX 3080Ti, 32GB of DDR5 RAM, a Quad HD 165Hz refresh rate display, and a fantastic mechanical keyboard as well. The M15 R7 had all laptops other than the MSI Raider beat in terms of performance scores, in fact, it even beat the MSI in certain CPU benchmarks; the Intel Core i7-12700H really shines, beating out several laptops with i9s. In terms of gaming

benchmarks, once again the M15 R7 had most laptops but the MSI Raider beat. Ironically, the Alienware X17 R2 which was also a contender in this segment, with better specs, did not manage to outperform the M15. The Alienware M15 R7 gets a deserved spot as our Digit Zero1 Runner-up in the best performing gaming laptop category.

Second Runner-up and Best Buy: Lenovo Legion 7 (16IAX7)

The only other laptop to feature a 12th gen Intel Core i9-12900HX, the Lenovo Legion 7 and the Alienware M15 R7 were extremely close throughout our testing process. We could say it was a tie between the two if we got rid of the decimal points in our scoring. Like we've established, the combination of the i9 HX processors and the 3080Ti will shred through just about anything, and the same reflects in the Lenovo Legion 7 as well. In addition to the i9 and 3080Ti, you've got 32GB of DDR5 RAM, and a 16-inch quad HD display with a refresh rate of 165Hz. You shouldn't have any trouble playing most intensive games at high settings even in QHD. Of the three laptops we've discussed so far, the Legion 7 has the brightest display, but it's the least colour accurate of the lot. Keep in mind that in this the least colour accurate display is still very close to 100 percent sRGB coverage. The Lenovo Legion 7 wins our Digit Best Buy award in the best performing gaming laptop category.
