

The ₹121K to ₹200K laptop segment saw the most competition this year, with several laptops vying for the top spot. The difference in scores between our winner and the two runner ups (we could honestly have a few more runner ups with how tight the results were) was down to the decimal points. However, one laptop inched its way past the rest to the top. That being said, both runner ups deserve their spot on this list with the competition being as fierce as it was.

Winner: **Lenovo Legion 5 Pro (16IAH7H)**

The Lenovo Legion 5 Pro was one of two laptops in this segment which featured a 12th gen Intel Core i9-12900H processor. The Legion 5 Pro also came with 32GB of DDR5 RAM, and an NVIDIA RTX 3070Ti. The Legion 5 Pro scored as would be expected of a laptop with a 3070Ti with a slight edge of a few frames over the other laptops; probably due to superior CPU performance.

With that said, you will have no trouble handling just about any modern AAA games you throw at the Lenovo Legion 5 Pro, at high or even ultra settings as long as you're playing on FHD. Lenovo has all bases covered with the Legion 5 Pro, which is why it is our Digit Zero1 Award winner for the best performing laptop in the ₹121K to ₹200K price range.

Runner Up: **Dell G15 5521 Special Edition**

Powered by an Intel Core i7-12700H, 16GB of DDR5 RAM and an NVIDIA RTX 3070Ti, the Dell G15 Special Edition came very close to the Lenovo Legion 5 Pro in terms of per-

Dell G15 5521 Special Edition
Price: ₹1,64,990

Alienware M15 R7
Price: ₹1,70,989

DIGIT BEST BUY WINNER-2022

Acer Predator Helios 300 (PH315-55)
Price: ₹1,39,999

Gaming Laptop (₹121K-₹200K)

The sweet spot

Lenovo Legion 5 Pro (16IAH7H)
Price: ₹1,50,720

formance. Real world gaming benchmarks saw near identical scores to the Legion 5 Pro. The G15 SE actually scored highest in this segment on all synthetic GPU benchmarks. If we were to judge purely on gaming performance, then we couldn't tell the difference between the Legion 5 Pro and Dell G15 SE.

2nd Runner Up: **Alienware M15 R7**

The Alienware M15 R7 fell just about a point short of the Dell G15 SE in performance scores, meaning it wasn't too far behind our winner either. Which is saying something because the Alienware M15 R7 features an NVIDIA RTX 3060, but was still able to hold its own and even beat some of the NVIDIA RTX 3070Ti laptops in real world gaming benchmarks.

Best Buy: **Acer Predator Helios 300 (PH315-55)**

The Acer Predator Helios offers great value for money in this segment, featuring top-of-the-line specs. It fell slightly short during our benchmarks despite the specs on paper, however, the scores are still nothing to scoff at.
