

Gaming Laptop (₹60K-₹80K)

Gaming on a budget

Laptops built for gaming tend to have hardware and features that are geared towards improving your gaming experience. However, all of these features also come at a premium, so as you reduce your budget, certain compromises need to be made. That being said, the ₹60K to ₹80K price range is a pretty solid entry level, where the number of compromises you need to make is steadily decreasing over the years. The competition was pretty tight for this year's Digit Zero1 Award for the best performing gaming laptop in the ₹60K-80K price range, with only a few points of difference in performance and in value for money. That being said, our Zero1 winner and Best Buy ended up going to the same laptop with the runner up following close behind.

Winner & Best Buy: **Lenovo IdeaPad Gaming 3 (15IAH7)**

Our Digit Zero1 Award Winner and Best Buy this year for the best performing gaming laptop in the ₹60K-80K price range goes to the Lenovo Ideapad Gaming 3. Over the years, Lenovo has really upped their game in the gaming laptop department,

offering more and more value for money options. Powered by an Intel Core i5-12500H, an NVIDIA RTX 3050Ti, and 16GB of DDR4 RAM, the laptop offers a solid config that can tackle most modern games you throw at it while offering decent framerates. You get a 15.6-inch FHD display with a refresh rate of 120Hz, which is great for competitive gamers. An unexpected surprise was the colour accuracy of the display at 98.1 per cent sRGB coverage and an average brightness of around 330 nits, setting it up as a solid entry level creator laptop as well. When gaming, you should have no trouble getting 60+ FPS on most modern AAA titles as long as you're playing on medium settings and the laptop should also be able to handle high settings comfortably for slightly older titles. The only downside to the Lenovo Ideapad Gaming 3 is the overall build quality, which at this price range is expected. Other than that, you can't really complain about the performance this laptop can churn out at this price.

Lenovo IdeaPad Gaming 3 (15IAH7)
Price: ₹76,539

Runner-up: **GIGABYTE G5 (MD)**

The Gigabyte G5 MD features almost similar specs to IdeaPad Gaming 3. This includes the NVIDIA RTX 3050Ti and the 16GB of DDR4 RAM. However, it features an 11th gen Intel Core i5-11400H processor, which is where it falls behind the IdeaPad Gaming 3. The difference in processor scores during our benchmarks is very evident. However, the Gigabyte G5 is no slouch when it comes to gaming. Thanks to similar GPUs, the G5's gaming benchmarks scores are very similar to those of the IdeaPad Gaming 3. But the IdeaPad Gaming 3 always inched slightly ahead. However, we will say that the G5 handles heat and throttling a lot better than the IdeaPad Gaming 3. They're both also very similarly priced, but with the IdeaPad Gaming 3 simply performing better in most aspects, it won out on the Best Buy as well. The G5 also falls short on the display, however that's not all that important in a gaming laptop. What is important is that the 15.6-inch FHD display comes with a refresh rate of 144Hz. You should have no trouble handling most modern titles at low to medium settings, and older titles at high or even ultra. Games like Valorant or CS:GO will be able to fully utilise the 144Hz display on this laptop, even at high settings. Considering all of the above, the Gigabyte G5 MD is our Digit Zero1 Runner Up for the best performing Gaming Laptop in the ₹60K to ₹80K price range.

GIGABYTE G5 (MD)
Price: ₹76,990
