

Best Creator Laptop

Limited only by your imagination

Gaming isn't the only thing that needs power. Content creation, such as photo and video editing, 3D rendering, and even streaming requires powerful hardware. While most decently powerful laptops can handle basic editing, creator laptops exist specifically for handling such tasks. They come with powerful processors and GPUs, often paired with large amounts of RAM. Our winner and runner up were extremely close. That being said, both have their pros and cons, but when it comes to performance, our Digit Zero1 Award winner is...

Winner: MSI Creator Z16P (B12UGST)

The MSI Z16P, as a creator laptop can shred through just about everything you throw at it. It comes with one of the best touchscreen displays we've tested this year, with high resolution and good colour accuracy. Under the hood, you've got a 12th gen Intel Core i7-12700H powering the laptop, which is paired with 32GB of DDR5 RAM and an NVIDIA RTX 3080Ti. You also get 2TB of NVMe SSD storage. Even with all that powerful hardware under the hood, the MSI Z16P is still pretty slim and sports a fairly professional aes-

MSI Creator Z16P (B12UGST)

Price: ₹2,57,990

thetic. Other than that you've also got a pretty decent webcam on the laptop. We really only had two complaints about the MSI Z16P, the first being heat. The laptop tends to heat the laptop up pretty quickly which affects the laptop's overall battery performance as well. However, this is mostly only the case during periods of intense activity. There was no noticeable drop in performance. The second complaint was a lack of more IO options. The Z16P is a creator laptop, and achieves what it sets out to do perfectly, which is why the MSI Z16P is our Digit Zero1 Award Winner for best performing Creator Laptop.

Runner-up: GIGABYTE AERO 16 (Y5)

The Gigabyte Aero 16 came extremely close to winning but fell slightly short despite packing the 12th gen Intel Core i9-12900HK. Both the RAM and the GPU on the Aero 16 and MSI Z16P are the same. It fell slightly short while benchmarking. That being said, the Gigabyte Aero 16 is still an excellent

Creator laptop, like we mentioned it only just fell short of the Z16P, and will shred through all your creative tasks. The 4K OLED display on the Aero 16 is its most impressive feature, with better colour accuracy. It also has a 16:10 ratio, which gives you more screen to work with. While the Aero 16 features a roomier body, it still generates significant heat, which makes sense considering the hardware under the hood. It's also scarce in terms of I/O. The cooling solution works, but the fans get loud. All in all, the Aero 16 is one of the most powerful laptops we've tested this year, and is our Digit Zero1 Runner-up.

Best Buy: Lenovo Legion S7 (16IAH7)

The Lenovo Legion S7 comes with an Intel Core-i7 12700H and 32GB of DDR5 RAM, which is the same as our winner. It's targeted at people who need power, but not for gaming. It comes with a weaker GPU, with the highest available variant being the NVIDIA RTX 3070. This configuration isn't weak. The one place the Legion S7 has both the others beat is with its selection of IO ports, including Thunderbolt 4. Coming to the display, you get a fairly colour-accurate 165Hz WQXGA display, which will definitely suffice. The S7 also suffers with heat issues. All things said however, you will still get great performance from this laptop, especially at a price point for which reason the Lenovo Legion S7 wins our Digit Best Buy award.
