

A premium thin and light laptop is a laptop that can offer you both productivity and portability. These laptops are lightweight and slim, however, they also come packed with power inside their slim bodies. Pulling this off is no easy feat, yet we've seen some brands coming out with thin and light year after year, managing to improve them and somehow fit even more power into these machines. Our winner and runner up come from two brands who have been in the premium thin and light game for a long time, so it doesn't really come as all that much of a surprise. Let's find out which laptop came out on top.

Winner: **Lenovo Yoga 9 (14IAP7)**

Lenovo's Yoga lineup of laptops has always been a favourite when it comes to convertible thin and lights in the market. The Lenovo Yoga 9 is an all-rounder 2-in-1 which offers great performance across the board with some solid hardware under the hood, including a 12th gen Intel Core i7-1280P which can compete with

DELL XPS 13 Plus 9320
Price: ₹1,79,990

some H variant processors as well while still being energy efficient and offering decent battery life. It could still handle light gaming considering Intel Iris Xe integrated graphics are pretty decent, and it should have absolutely no trouble with just about everything else you throw at it. Of course, complementing the specs under the hood, you have a fantastic 4K display as well, which offers good brightness and colour accuracy. The Yoga 9 is not only the best performing 2-in-1 laptop of 2022, but also our Digit Zero1 Award Winner for the best performing Thin and Light Laptop.

DIGIT BEST BUY WINNER-2022

Xiaomi Notebook Pro 120G
Price: ₹74,999

Runner Up: **DELL XPS 13 Plus 9320**

Much like Lenovo's Yoga lineup, the XPS lineup from Dell is also a favourite in the thin and light segment. The Dell XPS 13 Plus' accompanying OLED display is good, but falls short of the display on the Yoga 9 when it comes to colour accuracy. The variant we got for the Zero1 Awards came with an Intel Core i7-1260P, which is slightly weaker than the i7-1280P in the Yoga 9 and that reflected in our tests as well. They've also done away with just about all I/O ports save two type-C ports. Despite all this, the Dell XPS 13 Plus certainly packs a punch.

Best Buy: **Xiaomi Notebook Pro 120G**

We were honestly surprised at the performance you could get out of the Xiaomi Notebook Pro 120G at its price of ₹74,999. This includes the specs under the hood; the 12th gen Intel Core i5-12450H, which can easily compete with P and U variant processors which come in laptops that are a lot more pricier, 16GB of LPDDR5 RAM, and 512GB of NVMe SSD storage. However, the Xiaomi Notebook Pro 120G also comes with a dedicated GPU in the NVIDIA GeForce MX550 in addition to Intel UHD graphics. You're certainly not going to be doing any heavy duty gaming on this, but it should be able to handle light gaming and older titles no problem. The Xiaomi Notebook Pro 120G is excellent value for money and deserves our Digit Best Buy award for this category.
