

Best Bluetooth Speakers

Take the tunes with you

In the last few years, speaker technology has evolved a lot. With calling, voice assistants, multi-point connection, 360 degree immersive audio, and adaptive EQ correction being baked into them, finding the best speaker of all is a tough task. However, this year, when bluetooth speakers showed up at the Digit Test Center for the Zero1 we were on the hunt to find the best performing speakers, as well as the ones that will give you the best value for your money. Let's look at which speaker took the top spot in our Digit Zero1 and Best Buy awards.

Winner: AIWA MI-X 330 Meteor

The AIWA MI-X 330 Meteor comes packed with an impressively tuned 3.5 mm tweeter and a 3.5-inch subwoofer, which produces a sound output of 60 W. The sound output from the speaker was surprisingly close to neutral. However, if you are looking to tune the sound to your liking, you get bass and treble controls in the form of dials on the speaker itself. During our testing, the speaker got pretty loud without distorting, and the latency on the bluetooth playback when consuming content was also minimal. On top of that, the AIWA MI-330 Meteor boasts a 24 hour battery life. All this ensured

AIWA MI-X 330 Meteor

Price: Starting at ₹34,990

that the speaker took the top spot in our awards!

Runner-up: LG RP4G XBoom 360

The LG RP4G XBoom 360 gave a tough fight to the MI-X 330 and featured 360-degree audio, which our winner didn't have. However, the RP4G fell short in sound quality. The overall sound signature of the speaker leans towards being slightly bass heavy. However, we preferred AIWA's bass over the RP4G, which at times felt a bit too overwhelming. The RP4G can get insanely loud, making it ideal for large gatherings, both indoors and outdoors. All in all, the LG RP4G XBoom 360 makes for a great buy if you are looking for a speaker that you can use for large gatherings.

2nd Runner-up: Sony SRS-XE300

The Sony SRS-XE300 is the latest addition to Sony's lineup of bluetooth

speakers. The speaker comes with an insane 24-hour battery life, which puts the 10-hour batteries of the LG and AIWA to shame. However, when it comes to the sound signature and other aspects of our performance metrics, Sony fell behind slightly. While it performed great in vocal heavy tracks, other factors such as loudness prevented it from taking the top spot. Its sound signature as a speaker is great and paled only when pitted against the speakers from AIWA and LG. The overall sound quality of the speaker is excellent, as we have come to expect from Sony.

Best Buy: JBL Flip 6

The JBL Flip 6 comes with a 2-way speaker system that tries to simulate 360-degree audio, and does a fairly good job. The speaker comes with a bass heavy sound signature out of the box which is advertised by the brand as "JBL Original Pro" sound. This is something that has been lauded by bass lovers for years. This is powered by a 12 hour battery. The size, the portable form factor, and the overall sound performance of the JBL Flip 6 made it the perfect contender for our Best Buy Award.
