

A few years ago we pointed out that most of the Digit Zero1 Award contenders for the best mechanical keyboard did not feature Cherry MX switches. Well, this time around none of the mechanical keyboard contenders features Cherry MX switches! From Logitech to Razer and other premium gaming brands have moved on to proprietary switches. This spices things up a bit, because one brand's switches may not be the same as another's. This obviously, gives the consumers, more options. While switch preference is ultimately subjective, our Digit Zero1 Award winner for best performing Mechanical Keyboard had a lot more than switches going for it.

Winner: **ASUS ROG Claymore II**

The Swiss Army Knife of mechanical keyboards. That's how we'd define the ASUS ROG Claymore II. It is the best keyboard that ASUS has to offer as of right now. This is a modular keyboard and features optical switches. You've also got dedicated media and macro

Razer Huntsman V2
Price: ₹19,999

keys, and a volume dial, on the detachable numpad. Then there's the cushioned, magnetic wrist rest and USB passthrough. The ROG RX Optical switches felt great to type and game on; the unit we received came with linear switches, but you have other options as well. The keyboard is wireless too! There's a cool battery indicator on the top left as well. You get about 40 hours worth on a single charge with the lights on, and a whole lot more if you keep them off. Overall, the ASUS ROG Claymore II is an excellent mechanical keyboard with oodles of useful features. For this reason, it wins our Digit

DIGIT BEST BUY WINNER-2022

Cooler Master CK352
Price: ₹4,999

Zero1 Award 2022 for best performing mechanical keyboard!

Runner-up: **Razer Huntsman V2**

Another brand to join team propriety and optical switches, the Razer Huntsman V2 features Razer Optical Switches, and can also go up to a polling rate of 8000Hz! You've got many options when it comes to the switches. The overall typing and gaming experience on the Huntsman V2 was also pretty good. The lower response time with optical switches is always a plus. You've got dedicated media controls, a volume dial on the top right above the numpad, full RGB backlighting that you can sync with other devices using Razer Synapse, and a robust build. You also get a wrist rest. It still has great feel and performance to back it up, which is why it's our Digit Zero1 Runner Up for best performing mechanical keyboard.

Best Buy: **Cooler Master CK352**

The Cooler Master CK352 comes in as a no-frills full-sized mechanical keyboard which features LC mechanical switches. That's not a bad thing, considering the premium you have to pay for optical switches. The CK352 features pretty decent build quality with a mix of metal and plastic. You don't get any extra dedicated keys or a wrist rest and all that. There's no software support either. But hey, you can change lighting and colour combinations through the modifier keys up top. It's a solid mechanical keyboard, with a nice typing and gaming experience, and sturdy build quality. At a price of ₹4,999 it's a pretty good deal, and our Digit Best Buy Award winner.
