

Best Gaming Headset

Immersion guaranteed

The competition between gaming headsets this year was pretty tight, which made our job of crowning the best performing Zero1 Gaming Headset of 2022 all the more difficult. However, one headset did end up coming out on top and it's a newcomer (not really, you'll know). We've also got two runner-ups this time, both of which were not very far behind our winner. As we mentioned earlier, the competition was pretty close cut this year. Now that we've got that out of the way, let's start things off with our Digit Zero1 2022 Award winner for the best-performing Gaming Headset!

Winner: Sony INZONE H9

This year we saw Sony make its foray into PC gaming, with its Sony INZONE H9 which is a direct improvement over the Sony Pulse 3D headset and borrows a lot from them. The H9 also features superior build quality, a better mic, and better overall comfort. The H9's default sound profile is balanced across, providing controlled and explosive lows without losing out on any of the details in the mids and highs. All your in-game sounds will feel impactful without

jarring, and ambient sounds from in-game environments will also sound clear. 3D audio also sounds great on the H9; we had little to no trouble pinpointing where those footstep sounds were coming from. These headphones will also work flawlessly with PlayStation 5's Tempest 3D technology, and they're also wireless too. Thanks to its balanced sound profile, the INZONE H9 are not only a great pair of gaming headphones, but just good headphones overall for consuming any kind of content. For this reason, the Sony INZONE H9 is our Digit Zero1 Award Winner for the best performing Gaming Headset.

Runner-up: ASUS ROG Fusion II 500

Much like the Sony INZONE H9, the ASUS ROG Fusion II 500 features a very balanced sound profile, falling only slightly short in terms of performance. While the H9 offered slightly better sound performance, the Fusion

II 500 excelled in other aspects. This includes the AI noise cancellation microphone, and similar 3D surround sound performance. Unfortunately, while the ROG Fusion II 500 is technically cross-platform compatible, you don't get access to all of its features without the app. These are not only a great pair of gaming headphones, but a solid pair of headphones to consume all kinds of content. All kinds of audio is represented well. The Fusion II 500 comes with four DACs housed within the two cups. Add to that a premium aesthetic, solid build quality, and great comfort, and this is one of ROG's best headsets to date.

2nd Runner-up & Best Buy: Corsair HS65 SURROUND

The Corsair HS65 Surround features great build quality, comfort, an attractive and minimalistic design, also delivers when it comes to audio performance. The 7.1 surround sound performs admirably, and it has a good overall sound profile with decent bass that doesn't drown out the mids and highs. The Corsair HS65 is a decent pair of headphones to consume non-gaming content as well. In addition to customisable EQ, the HS65 also comes with SoundID technology from Sonarworks. At a price of ₹8,199, the Corsair HS65 wins this year's Digit Best Buy Award for Gaming Headsets simply because you get premium performance and features at a budget.
