

This year, there have been a fair number of smartwatch releases that are smarter and more capable of keeping us fit.

Many of them are no longer just smart-phone companions; we can see them moving towards a future where they could work without any reliance on phones. They already come equipped with a host of sensors to gauge our health, and the additions of smart features like auto workout sensing, GPS logging, call functionality, etc, make smartwatches very purposeful personal devices in our daily lives. So, in the Digit Zero1 smartwatch showdown, we put wearables from leading brands through the wringer and only the ones who proved their mettle made the final cut.

Winner: Samsung Galaxy Watch5 Pro

The Samsung Galaxy Watch5 Pro has a refined Wear OS smartwatch experience for Android users. If its predecessors were any sign of what a Samsung and Google partnership could bring about, this year's Watch5 Pro model ups the ante on everything that encases this

rich software experience. This includes premium build materials, a smooth and sultry AMOLED panel, a cellular calling solution, smart workout and well-being trackers, advanced navigation features, as well as a massive milliamp battery that lets you go the extra mile. In our tests which were performance and battery endurance-centric, the Watch5 Pro passed with flying colours and hence takes the crown for the best smartwatch of 2022.

Runner-up: Apple Watch Series 8

The only reason Apple lost the gold to Samsung is because of the Apple Watch Series 8's shorter battery life. However, what it offers in its runtime is par excellence. Apple has also added new temperature sensors and car crash detection functionality.

Apple Watch Series 8

Price: ₹79,990

realme Watch 3 Pro

Price: ₹4,999

DIGIT BEST BUY WINNER-2022

Noise ColorFit Pro 4

Price: ₹3,499

You get precise activity tracking and health monitoring, reliable eSIM calling, a robust build and ingress protection, a polished app ecosystem, and smooth integration with iPhones. So, if you own the latter, the Series 8 is a no-brainer.

2nd Runner-up: realme Watch 3 Pro

The realme Watch 3 Pro is the second runner up and for a smartwatch priced at ₹4,999, had a lot going for it. It packs an AMOLED display, Bluetooth calling support, standalone GPS-based navigation tracking, and performance comparable to the aforementioned high-end wearables. Keep it up, realme!

Best Buy: Noise ColorFit Pro 4

If there's a product that has nailed the value-for-money offering, it's the Noise ColorFit Pro 4. It is a comfortable wrist-wear that's decently accurate when it comes to fitness tracking and is armed with IP68 dust and water resistance, Bluetooth calling and a rather long battery life. There are some features missing, but considering the price, we can give it a pass. That makes the Noise ColorFit Pro 4, objectively the best bet if you are on a tight budget.
