Astronomical wonders

Some of the most breathtaking astronomical pictures of 2022!

Aaryaman Dhaiya | feedback@digit.in

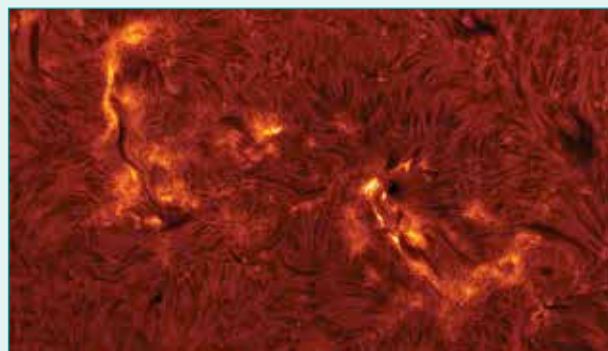

A winner of the Astronomy Photographer of the Year 2022, this time in the category of "Overall". It was clicked by Gerald Rhemann and is known as the "Disconnection Event".

A picture of the "Majestic Sombrero Galaxy", this image won an award in the 'Galaxies' category of the Astronomy Photography of the Year 2022. It was clicked by Utkarsh Mishra, Michael Petrasco and Muir Evenden.

This is one of the first photos clicked by the James Webb Telescope of a nearby young region referred to as NGC 3324 in the Carina Nebula. These areas were previously unknown.

This photograph was taken in Preston wherein the photographer has filtered out all wavelengths but a narrow red band to show and active region of change in the sun

This image by Yang Sutie was for photographs that added a human element to it. This image was taken over the National Highway 219 which is the highest national highway in the world

'The Crescent Nebula' by Bray Falls won in the category of "deep objects" in the Milky Way galaxy. This image of the Crescent Nebula was made as a result of shockwaves.
