an Antarctic expedition that goes south because of the horrors that occur after ancient ruins are discovered. Doesn't it ring a bell? This project's origins trace back to 2006 and it is the film adaptation of 'At the Mountains of Madness' which was actually a book written by H.P. Lovecraft.

Guillermo Del Toro, who is a celebrated Mexican filmmaker, was the one spearheading this project.

While there were regular rumours that were dropped of the film by the filmmaker and other sources, the film remains to see the light of day.

But the reason for the delay is now evident as Del Toro has recently commented that his vision for the movie had evolved over the years and a new script would now be written before going ahead with any work.

E.T. 2

Critics have often praised E.T. Those who have praised it claim it to be one of the best sci-fi movies of the generation and some even going one step ahead by saying how it was one of the best films ever made. Owing to its huge success among critics it became a hit among people too which was why it became one of the highest grossing films of all time. It was later left behind by another, loved by all Spielberg film, Jurassic Park. But very few people know that

there could have been a sequel to the movie.

Along with Melissa Mathison who was involved in the writing of the first one as well, Spielberg revealed that the second one, titled ET 2: The Nocturnal Fears, was already in the works. It was said to have a similar beginning which was a huge

UFO landing in the same forest.

The story was almost set where the aliens were against ET's faction and it was a script of Elliott being kept hostage where he does save them for a short time but ultimately leaves.

Spielberg had shot the first one in such a way that there would be no prequels or sequels required to explain the story which is why he was not on board since the first day itself. That is why the movie remained in the development stage and never saw the light of day.

HALO

Halo is a video game that keeps its fans hooked. It is well known that video games being adapted into movies have typically not proven to be a success. However, fans hoped Halo would be able to break this streak, but alas! There were a lot of people who were tried on for bringing this movie to life but nothing worked.

This was a movie that saw a crisis from day one. Microsoft had clashes with Peter Jackson (Executive

producer), then with Neil Blomkamp (Director). The last straw was when 20th Century Fox kept on delaying production. This led the film to be shelved until further notice (Don't we all know what that means?)

The fans were not left without nothing though because soon enough, it was because of this movie that Jackson and Blomkamp came together to make District 9 which proved to be a hit among viewers.

NIGHT SKIES

While we have seen what happened when Spielberg decided to go ahead with a sequel of E.T., let us see what really led him to discovering the main character of Elliott.

The story is set right after the success of 'Close Encounters of the Third Kind' when Spielberg thought that a horror theme-based sequel would be right for this film. This was when 'Night Skies' was born which is the story of aliens terrorising a mid-western farm. But during its making, Spielberg got doubtful and thought he probably needs another direction wherein the wonder and spirituality of Close Encounters is kept intact.

This was when he moved the character and ET was born and was met with uproaring success on all fronts.

SHADOWS ON THE SUN

Do you know what would have happened had a meteorite hit earth and unleashed an alien? While we would have loved to, unfortunately, the project that was going to tell this story was shelved. This was going to be the plot of Stanley Kubrick's film 'Shadow on the Sun' but it never made it to the theaters because it was never made in the first place. It was going to be the adaptation of a radio drama on BBC Radio.

At that time it seemed like he got hold of a better opportunity in the form of working with Steven Spielberg on A.I. Artificial Intelligence, and that was that for Shadow of the Sun. Disappointing, since it could have been a fun watch. **d**
