There is no OnePlus 11 Pro model coming: Li Jie

Li Jie, the president of OnePlus China dropped some big news on Weibo while he was telling people that the OnePlus 11 presale “broke the fastest sales record in history”. He shared that there won't be a OnePlus 11 Pro model to a commenter. Unlike previous flagship launches, this time, there won't be so many options but they will continue their 'T' series with the OnePlus 11 for better specifications and a revamped design. So you can expect the OnePlus 11T to roll out in the market by the second half of 2023.

The OnePlus 11 has launched in China and it seems like a hit with the people there. The OnePlus 11 and One-

Plus Buds Pro 2 were also quite successful in China. The OnePlus 11 is powered by the Qualcomm SM8550 Snapdragon 8 Gen 2 (4 nm) and it runs on ColorOS 13 in China and will be seen running on Android 13 in India. The flagship by OnePlus packs a battery of 5000mAh and supports 100 watts of fast charging. OnePlus claims that it will charge 1% to 100% in just 25 minutes. The display of the OnePlus 11 features a 6.7-inch LTPO3 AMOLED display with a 120Hz refresh rate. It is also supported by Dolby Vision and emits

1300 nits at peak brightness. The OnePlus 11 has a triple camera setup and it has once more collaborated with Hasselblad and equipped the Hasselblad lens for excellent image quality. The phone has a 50-megapixel primary camera, 32-megapixel telephoto sensor and 48-megapixel ultrawide lens. It has a 16-megapixel selfie shooter. The OnePlus 11 has already rolled out in the Chinese market and it is most likely to hit the Indian market by next month.

Apple iPhone 16 Pro models may feature a new 3nm A18 Bionic SoC

Apple's iPhone 14 series had launched in September 2022, and included the Apple iPhone 14, Apple iPhone 14 Plus, Apple iPhone 14 Pro, and Apple iPhone 14 Pro Max. As is the case every year, Apple strives to bring new improvements to its lineup with each launch. Based on a tipster's rumours, the Apple iPhone 16 may offer faster memory capabilities, while the

Apple iPhone 15, which will launch this year, may have hardware that's similar to the Apple iPhone 14 series. Tipster ShrimpApplePro (@VNchocoTaco), tweeted that the Apple iPhone 16 Pro models may feature the next-generation A18 Bionic SoC. This chipset is rumoured to be based on TSMC's enhanced 3nm process. The Apple iPhone 15 Pro models may, on the other hand, come

with the A17 Bionic chip that is based on TSMC's N3B chip process. The tipster has also claimed that the Apple iPhone 16 Pro might come with faster LPDDR5X RAM. The Apple iPhone 15 will feature the same LPDDR5 memory as the Apple iPhone 14 Pro models. It is believed that the Apple iPhone 15 will come with 8GB RAM. This may result in better multi-tasking capabilities as well as faster functionality. There are also plenty of specula-

tions about the overall design and features of the Apple iPhone 15. Rumours indicate that the Apple iPhone 15 and Apple iPhone 15 Plus will have a 48 MP camera. Moreover, the Apple iPhone 15 Pro and the Apple iPhone 15 Pro Max may have solid state buttons with haptic feedback, along with a titanium frame.
