Samsung Galaxy Unpacked 2023

Late last year, we'd speculated that the Samsung Galaxy Unpacked 2023 event will take place on February 1. Now, the same has been confirmed via a leaked digital creative that states that the event will be taking place on said date. This is great news for fans of the South Korean manufacturer as the brand will be unveiling the latest Samsung Galaxy S23 lineup, including the vanilla Galaxy S23, Galaxy S23+, and Galaxy S23 Ultra. As we're inching closer to the launch date, there have

been plenty of speculations and leaks regarding the Samsung Galaxy S23 specifications. A recent leak indicated

that Samsung will not be offering a 128GB storage for its base model. The storage options for the Samsung Galaxy S23 and Samsung Galaxy S23+ starts at 256GB. The Samsung Galaxy S23 Ultra is tipped to offer two storage options: 512GB and 1TB. It is also believed that the Samsung Galaxy S23 and Samsung Galaxy S23+ will come with 8GB RAM. The Samsung Galaxy S23 Ultra, on the other hand, will have 12GB RAM.

Qualcomm and Iridium are all set to bring satellite-based messaging to Android phones

Qualcomm and Iridium have partnered to create a satellite-based message service that will be available on premium Android smartphones. Interestingly, Apple had unveiled a similar feature a few months ago, announcing that consumers could use the Apple iPhone 14 smartphones to send emergency messages via satellite link-ups. These services are only available in Canada and the

United States. The Android smartphones come with a Qualcomm chip that can connect with satellites even

in the absence of cellular data connection and Wi-Fi. The service offered by Qualcomm and Iridium has been dubbed Snapdragon Satellite. The company announced that this service will be available in select regions starting in the second half of 2023. It will work on smartphones that use the second-generation Snapdragon 8 mobile platform.
