

WhatsApp has announced a new feature which gives you access to communicate with people without being connected to the internet. Yes, you can now communicate on WhatsApp without the internet if you are facing issues like shutdowns. WhatsApp has added proxy support to chats which can be used through proxy servers set up by folks and organisations to help people communicate all over the world. WhatsApp added that communicating by proxy will be protected by end-to-end encryption.

"We're putting the power into people's hands to maintain access to WhatsApp if their connection is blocked or disrupted. Choosing a proxy enables you to connect to WhatsApp through servers set up by volunteers and organisations around the world dedicated to helping people communicate freely," WhatsApp said. The widespread protest of Mahsa Amini, 22, who died in police custody in Iran, led to the government blocking WhatsApp in Iran. Months after this incident, WhatsApp launched this feature where the internet won't be a barrier to using WhatsApp for communicating.

Here's how you can enable it on Android:

- You need to have the latest version of WhatsApp.
- Go to Settings
- Tap on Storage and Data
- Then Go to Proxy and tap Use Proxy
- Tap Set Proxy and enter the proxy address and tap Save
- A checkmark will show if the connection is successful and if you are still not able to communicate by proxy then tap and hold the proxy address to delete it and then type a new proxy address

Here's how you can enable it on iOS:

- You need to have the latest version of WhatsApp.
- Go to Settings
- Tap on Storage and Data
- Then Go to Proxy and tap Use Proxy
- You need to enter the proxy address and then tap Save
- A checkmark will show if the connection is successful and if you are

■ WhatsApp

There's a lot going on!

still not able to communicate by proxy then tap and hold the proxy address to delete it and then type a new proxy address

What will WhatsApp beta for Android 2.23.1.26 bring?

WhatsApp is also all set to roll out a new update via its Google Play Beta Program, which will bring the app version to 2.23.1.26. Before it rolls out the update though, WhatsApp is also working on 2.23.1.25, which will be rolled out first. One of the major aspects of this update is that it will let you transfer chat histories from one Android smartphone to another, negating the need to backup the chat history on Google Drive before doing so. While the chat transfer feature is still being developed, WhatsApp is also developing its WhatsApp beta

for Android 2.23.1.26 update that will build on the feature, according to WaBetaInfo. Screenshots published on WaBetaInfo show that users can start by downloading the app on the new Android device. On opening the app, a QR code will be displayed. This needs to be scanned in order to initiate the process of migrating their chat history to the new smartphone.

This will make it quite easy for users to just transfer the history without wasting precious time backing up and then downloading important chat files. At this moment, this feature will only be available for Android smartphones (which means that you can only transfer the files from one Android phone to another).

As of now, there are no indications regarding when the update will be rolled out for the masses. The features are still in development.
