

Samsung introduces the Samsung Galaxy A14 5G

Samsung has announced a new budget phone, the Galaxy A14 5G. Along with TVs, refrigerators and accessories, Samsung launched the Galaxy A14 5G during CES 2023 in Las Vegas. The phone is likely to be rolled out in the European market by April and soon in the US market. However, there is no news of the Samsung Galaxy A14 launching in India yet.

SPECIFICATIONS OF SAMSUNG GALAXY A14:

- The Samsung Galaxy A14 has a triple camera setup on the back and a water drop notch in front. It has a side-mounted fingerprint scanner, a USB Type-C port, and a 3.5mm audio jack.
- The Samsung Galaxy A14 is powered by the MediaTek Dimensity

700 chipset and it will come with the storage option of 4GB RAM + 128GB storage. The storage can be expanded up to 1TB by using the memory card. It runs on Android 13-based One UI 5.0.

- It features a 6.6-inch IPS LCD with

FHD+ resolution with 90Hz refresh rate support.

- The camera of the A14 is pretty much the same in comparison with the A13 but Samsung has upgraded the selfie shooter in this one. It has a 50-megapixel primary along with a 2-megapixel depth sensor and a 2-megapixel macro lens. The selfie shooter has been upgraded to 13-megapixel from 5-megapixel.
- The Samsung Galaxy A14 is packed with a 5000mAh battery with 15W of fast charging support.

Samsung Galaxy A14 5G will be in the European market by April at a price of €229, which makes it Rs 20,000 for India, but there is no further information on when the A14 is going to be available in India. The Samsung Galaxy A14 will be available in the US market soon as well.

Sony and Honda announce Afeela, a part of their joint mobility venture

Honda and Sony's joint mobility venture revealed their new EV prototype during Sony's CES presentation on Wednesday in Las Vegas. This prototype is known as Afeela and will be the first electric car produced by the venture. The company believes that it will be ready for sale in three years (2026) in North America. The company has not offered a lot of information about the new EV offering, however, according

to Yasuhide Mizuno, the CEO of Sony Honda Mobility, the car will be a unique offering that will include entertainment, AI, augmented reality and virtual reality features. It is likely that it will be self-driven, though this is not confirmed. Elaborating on the same, Mizuno said "Afeela represents our concept of an interactive relationship where people feel the sensation of interactive mobility and where mobility can detect and understand people and society by utilizing sensing and AI technologies."

The exterior of the car is believed to pack 40 different sensors, including ultrasonic, lidar, cameras, and radar. As a result of this, it will be able to detect objects and drive automatically without manual driving required. The car has been built keeping three themes in mind, autonomy, augmentation, and affinity. Some of the software in the car may come with subscription services, which means users will have to pay to use them on a monthly basis. The pre-orders for this EV will open sometime in 2025, and the car will be sold in America in 2026, followed by Japan and certain parts of Europe.
