

Best of CES 2023: Here are the most interesting CES product announcements

As a wrap-up to CES 2023, we are listing the best product reveals and announcements from this year's Consumer Electronics Show, held at Nevada Las Vegas from January 5 to 8. After the pandemic years, this is the first big tech event where companies, media representatives, and tech enthusiasts met, nerded-out, and experienced cutting-edge tech in person. We have covered a lot of the tech launches in the past couple of days but here, you will see the best of CES 2023, or the wackiest and most exciting products unveiled at this year's CES show.

1. BMW I VISION DEE

BMW goes all digital and delirious with the i Vision Dee car that changes colours in seconds. Dee stands for 'digital emotional experience'. It's one of the prototypes showcased as part of the

company's Neue Klasse platform. i Vision Dee has a monolithic software design and e-ink body panels that allow the user to change and control the colour patterns/animations on 240 various segments of the car's exterior. Even the headlights can show "facial expressions" thanks to their ability to change shape.

Inside the car also, the Heads-up display (HuD) is digital and the user can choose the different content to appear there. The same goes for the dashboard, door panels and Wind-shield (that supports Mixed Reality content). Rest, there is a 4-spoke

square steering wheel and single-piece seats. BMW is yet to reveal the technical details, but we have heard of a new cylindrical battery technology and 6th gen powertrain being in the works for these concept car models.

2. LENOVO YOGA BOOK 9I

Lenovo Yoga Book 9i is a dual-screen foldable laptop with two 13.3" 2.8K OLED panels with 60Hz refresh rate,

400-nits brightness, 16:10 aspect ratio, 100% DCI-P3 colour coverage and Dolby Vision HDR support. These two displays are stacked on top of each other with a hinge in the middle, giving the laptop its unique look and use case. You can attach a keyboard to the bottom. There is a stylus kept on the back and a kickstand. All 3 things are bundled with the laptop. You need not purchase them separately.

While the two screens are vertically placed, you can "flick" an app window to the other screen, or use a 5-finger tap on the app window to maximize and fill it across the entire top and bottom canvas — called Waterfall mode. Now, if we want to use it as a regular clamshell laptop, you can do that too, with the bottom screen bringing up a haptic keyboard. As for the rest of the laptop, you have Windows 11, 13th gen Intel Core i7 CPU, Intel Iris X graphics, 16GB LPDDR5x RAM, 512GB/1TB PCIe SSD Gen 4 storage, Dolby Atmos backed stereo speakers, FHD IR webcam, 3 USB-C (w/ Thunderbolt 4), Bluetooth 5.2 support, and WiFi 6E.

3. WITHINGS U-SCAN

Withings, a well-known brand in the health-based wearable space, has introduced a Chromecast-like looking WiFi-connected urine analyzer that you place on the edge of your toilet bowl, in a way that your pee falls on it. It scans the pee in a minute or so and sends the report including stats like pH value, specific gravity, menstrual cycle and nutrition levels to the Withings app on your smartphone. It has light and sound indications about its working.
