

4. LG SIGNATURE OLED M3

LG Signature OLED M comes in three screen sizes viz. 77-inch, 83-inch and 97-inch. It is powered by an Alpha 9 processor, is way brighter than the LG B3 displays, and sports Dolby Vision and Dolby Atmos audio. It supports 4K 120Hz content but the more exciting aspect is that it will be delivered to the screen wirelessly. The LG M3 comes with no ports (except for the power socket), and all the connectivity is handled by a black box called Zero Connect meant to be placed up to 30 feet away from the TV. This cube consists of 3 HDMI 2.1 ports (supporting VRR), 2 USB ports, 1 Ethernet port, 1 3.5mm audio jack, 1 TV antenna coaxial port, optical output port, and a mains plug. The Zero Connect can also wirelessly stream audio to a soundbar. "To ensure the seamless transfer of data from the box to the TV, the company developed an algorithm that instantly identifies the optimal transmission path. The algorithm also helps to minimize transmission errors or disruptions as it can recognize changes in the immediate environment — such as people or pets moving around the room — and switch paths accordingly," tells the LG press release.

5. AQARA FP2 PRESENCE SENSOR

Aqara has revealed the FP2 presence sensor that works on mmWave and WiFi to detect human presence

(supports multiple people) within a range of 16 to 23 feet, and accordingly trigger various smart home automation like light, and air conditioning, etc. You can also assign various zones in

your place to control its functionality even more granularly. It is powered by a USB-C port and is compatible with Apple HomeKit, Amazon Alexa, and other leading smart home platforms.

6. ATMOSGEAR ELECTRIC SKATES

AtmosGear electric skates are powered by a battery kept in an accompanying backpack. The skates stay tethered to the battery through a wire. So, the rider wears the battery backpack while skating. The company

claims about 25 km per hour speed and a range of 20 km on a full battery charge.

7. BRELYON FUSION

Brelyon Fusion is a 122-inch 8K OLED display that is not wearable but promises a fully immersive VR experience or what the company called an Ultra Reality optical display. It offers 110-

degree FoV, 700+ nits of brightness in native HDR, and a 144Hz refresh rate with 4K resolution. The company uses "a combination of optics and computational techniques to give you these virtual images without you having to wear goggles," says the company.

8. ASKA A5 FLYING CAR

Aska A5 is an eVTOL (Electric Vertical Take off and Landing) aircraft that can take off vertically (from a helipad or vertiport) or from a runway. It is a 4-seater that can fly up to 250 miles on a single charge. It can be parked in existing parking spaces and charged like any other EV at home or EV charging stations. It comes equipped

with a gasoline-based range extender engine (30 minutes reserve) too for a dual energy source. This, along with its large wings capable of gliding for a safe landing, six propellers (one on each wing), and a ballistic parachute should ensure a safe flight experience.

The company is aiming for going commercial by 2026 followed by an on-demand taxi service. ■
