

Realme 10 Pro 5G

Slim on bezels, not so slim on performance

Realme's signature number series of budget and mid-range smartphones has been fairly popular in India. This year, Realme has taken a different approach. Instead of the camera, the company seems to have shifted its focus more on the design and the overall feel of the Realme 10 Pro and Realme 10 Pro+ 5G. The Realme 10 Pro 5G, which has been launched as an under-₹20,000 offering in the country, is the latest smartphone to come into our test center. So let's find out if the almost bezel-less smartphone is a worthy performer.

₹18,999

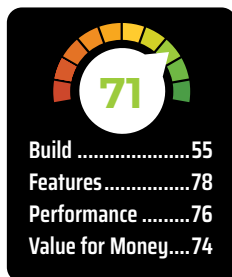

DESIGN

The build is nothing out of the ordinary, we have a glass-slab design with flat edges and a polycarbonate back panel. The smartphone feels super lightweight in your hands but the build quality does not feel very solid when you first hold the smartphone. At the front is where the Realme 10 Pro 5G's design speaks volumes. The Realme 10 Pro 5G has next-to-no bezels on the front. This no-bezel look makes the Realme 10 Pro stand out in terms of screen real estate. This is also the slimmest bezels that we have seen on any LCD display on a smartphone so far. However, the slight chin at the bottom kind of hinders with the whole bezel-less look.

DISPLAY

The Realme 10 Pro 5G uses a 6.72-inch LCD display with a 120 Hz refresh rate. The display is pretty responsive while using the smartphone. The 120 Hz refresh rate, paired with 240 Hz touch sampling rate makes things pretty slick while navigating through apps or scrolling on your feed. The colour accuracy, however, is not as good as we'd have gotten on an AMOLED display, but this LCD panel does well while you're watching content

or viewing pictures on the Realme 10 Pro.

Realme claims a peak brightness of 680 nits on the Realme 10 Pro's display. While testing this using a digital lux meter, the Realme 10 Pro 5G was able to achieve a peak brightness of 660 nits,

and a minimum brightness of 6 nits on a plain white screen. For viewing content, the Realme 10 Pro 5G's display is good, but not the best or the most colour accurate we have seen in this segment.

PERFORMANCE

The phone is powered by a Qualcomm Snapdragon 695 chipset paired with 8 GB RAM. This processor + RAM configuration is the same as the Realme 10 Pro's predecessor, the Realme 9 Pro. However, in terms of performance, the Realme 10 Pro showed a decent uptick over its predecessor. As compared to the Realme 9 Pro's 402,916 AnTuTu benchmark score, the Realme 10 Pro put out a benchmark score of 415,566 on AnTuTu. In Geekbench 5, the Realme 10 Pro 5G scored an impressive 683 points for single core tests, and 2016 points for multi-core tests. This is one of the highest as compared in this price bracket. The Realme 10 Pro performed fairly well in all bench-

marks that tested the smartphone's processing, rendering, multitasking, storage, RAM, GPU, and other parameters.

BATTERY

Coming to battery, the Realme 10 Pro 5G left us asking for a little more. The smartphone only gave us less than 5 hours of on-screen time. During gaming also, the Realme 10 Pro 5G's battery ran out faster than expected. Now, where the battery backup lacks, the charging more than makes up for it. The Realme 10 Pro comes with support for 33W fast charging for the 5,000mAh battery. It charged from zero to 100 in just under 70 minutes.

CAMERA

Coming to the camera, the Realme 10 Pro 5G comes with a dual rear camera setup that includes a 108-megapixel primary shooter, and a 2-megapixel depth sensor. The camera performance on the Realme 10 Pro 5G is just about average. The images look slightly dull and lacking detail, except clicking in 108-megapixel mode. The details are much better in 108 MP, and the camera adds a certain depth on its own if you are focusing on a single subject. The images from the front camera also seem overprocessed.

VERDICT

The Realme 10 Pro 5G is a decent mid-range smartphone, which does everything you'd expect and does it well, thanks to the nicely-optimised Snapdragon 695 SoC. However, the Realme 10 Pro 5G's design is the selling point here. Realme has managed to make the 10 Pro almost bezel-less, making the smartphone look almost unreal. However, the camera isn't great and in terms of battery life, the Realme 10 Pro ekes out just over a day's usage.
