

Score!

No, I haven't misspelt SKOAR! (our gaming sibling), I'm referencing the fact that I joined Digit in Jan 2003, and that's properly 20 years for me here when you're reading this. In that time technology has changed so much, I can barely recognise the devices we were going ga-ga over in 2003. Phones looked so different, digital cameras were such bulky things and had lower resolutions than my webcam, and the internet speeds we thought of as blazingly fast back then, would make anyone in 2023 laugh uncontrollably.

What's also changed a lot since I joined is this magazine itself. All you need to do is access the Digit PDF Archive* to take a look at those old issues and see how we evolved. Personally I think we got better as time went on, but I am definitely biased as well.

What you hold in your hands is another redesigned issue. Something I was working on for some time. I've chosen the flow and sections based on what we've always thought are Digit's strengths, and what we have thought our readers wanted us to cover. One big change is the reduction of science content, as we're not really science experts, and also we've stopped the dmystify. In its place we have brought SKOAR! out from inside the magazine to being a magazine on its own (which will come free with Digit). We've upped the number of pages inside Digit and SKOAR! To make up for the lack of the dmystify. We will also be stopping the eDVD soon, and instead publishing a downloads section on geek.digit.in that will be free to refer to. Watch out for that change as well.

This section (Opinion) is where we will publish all opinion pieces, which includes things the Digit editors want to say to you, and of course also what you want to say back to us. We will also be approaching more Indian industry and technology experts to write opinion pieces, and express their views about topics close to their hearts.

The Test section is where you will find everything that our Test Centres in Noida and Mumbai uncover during the month of rigorous testing they do on products across many categories. It's where you will find all

"We have brought SKOAR! out from inside the magazine to being a magazine on its own (which will come free with Digit)."

the buying advice and our test scores, plus product rankings, and more.

R&D is where we will cover all the topics that are aimed at sparking discussions and also sparking neurons in our brains. These are the stories that are designed to make you think, ask questions, do more digging of your own and of course introduce you to new concepts and technologies that are coming out very soon.

Learn is our section for workshops, tips and tricks, and generally helping you learn how to do something new. If you love tech and getting your hands dirty, but need a little help from time to time, this is the section for you.

Play is the section we get to have our fun, and you get to relax and give your brain some rest from all the heavy hitting sections you've read through before. If this magazine was a five course meal, Play would be the desert you enjoy right at the end.

The Cover Feature section remains unchanged, because there's always going to be a central story or theme of the month, which is depicted on the cover.

We also have coverage from CES, and all of the technology madness that happened there. Sadly we were unable to secure US Visas in time, because the waiting list is as long as a year from now in some cities for interview slots. While we're gutted to not be able to attend in person, especially after a few years of virtual only events thanks to the pandemic, we've still done the hard work of filtering through the thousands of launches and announcements to concise it all down into just the important stuff you should pay attention to. I'm quite sure we will attend next year, so watch out for coverage next time.

What I really need is feedback from all of you. Please let us know about the redesign. Do you like it, love it, hate it? What would you like to see covered more in SKOAR!? Are there any suggestions you have for us, people you'd like us to interview? Would you like to start writing for us yourself? We'd love to hear from you, so write to us at maga-zine@digit.in and express yourself! And of course. Happy New Year to all of you!
