

need to select the “reboot system now” tab. This will make your smartphone restart.

USE THE “DOUBLE-TAP TO WAKE” AND “DOUBLE-TAP TO SLEEP” OPTIONS

These days, many smartphones come with features like “Double-Tap to wake” or “Double-Tap to Sleep”.

If this is enabled on your smartphone, then you can use it to easily restart your phone without the power button.

If you haven't enabled this yet, all you need to do is follow these steps:

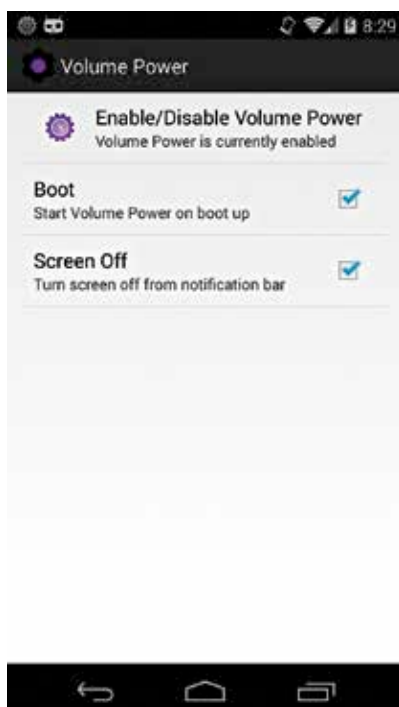

- Head to the settings menu
- Select Advanced Features
- Select Motions and Gestures
- Select Toggle to Enable Double-tap to Sleep
- Enable the function

SCHEDULED POWER ON/OFF

Here's a pretty simple way to restart a phone without a power button. By scheduling a power on/off time, you can just program your smartphone to switch itself on and off at specific times, negating the need for the power button entirely.

POWER BUTTON TO VOLUME BUTTON APP

Did you know that there are cer-

tain apps that can help you with switching on your phone without a power button? One of these apps is called Power Button to Volume Button app. You can download it via Google Playstore and use it to power your phone up or down when the power button stops working.

HOW TO RESTART AN IPHONE THAT HAS A BROKEN POWER BUTTON?

As is the case with Android phones, there are a few tricks that apply to iPhones that can help you turn off the phone without a power button. The following steps can help you reboot mobiles:

USE ASSISTIVE TOUCH

Assistive touch is a feature that is available on Apple iPhones. Here's how you can restart your phone without the power button using this feature:

- Go to Settings
- Select Accessibility Tap the AssistiveTouch button
- Tap the switch next to it to enable it
- A small circle will appear on the screen
- Tap the circle
- Tap Device
- Head to More Select Restart

DISPLAY THE POWER SLIDER

A great way to force your iPhone to shut down if the power button doesn't work is by pressing the Home and Volume down buttons. This will display the power slider after some time. You can slide it to the correct side to switch the phone off. While these hacks can certainly help you reboot a phone without a power button, it makes sense not to rely on them for too long. Make sure you head to a smartphone repair shop to fix the issue and enjoy a seamless experience with your smartphone.

Website restrictions: How to block a website on different devices?

Plenty of websites have harmful content that can be triggering for both adults and children. If you have children in your home and want to protect them from accessing NSFW content via the internet, the best thing to do is to block the website in question permanently. The steps you need to follow to block a website can vary depending on the device you are using. We've detailed the different ways to block a certain website whenever you want:
