Another feature of Digital well-being is Focus mode. It silences app notification sounds. Many phones like the recently released Pixels and Motorola phones turn on Do Not Disturb mode

when they are set down with the screen facing down.

Setting the Phone App on Windows

It is extremely easy to set up, here are the steps: Go to Settings > Add Phone > Add your Android Device, and you're all set to

Some recently released Samsung devices have even more options and possibilities with the Link to Windows option. It allows you to run multiple Android apps on the desktop in the Your Phone app.

Turn Off Amber Alerts

An Amber Alert is an alert that is received when a person near you goes missing. This is an extremely important feature as it lets the entire community know about a situation and shares essential information from time

You can enable debugging over USB, capture a bug report, flash window surfaces when they update, use the GPU for 2D graphics rendering, and much more.
