

to time. It is not recommended that you turn these off, but these alerts can get disruptive at times and are not that frequent in India. Here we'll let you know how to turn these alerts off.

Here's how to turn off Amber Alerts: Open Settings > Go to Safety & Emergency options > Tap Wireless Emergency Alerts > Turn off Amber Alerts.

Unroot Your Android Device

Rooting your phone is one of the most interesting features available on an Android device. It can be a great way to unlock its true potential. Things get a lot more complicated when you root your phone and rooting can even harm your phone if not done carefully.

Rooting a phone is a fairly common process and tips on how to root your phone can be found easily on the internet. But what happens if you want to unroot your phone? Here are a few tips as to how you can unroot your phone and bring it back to factory-intended settings.

There are many apps you can use if you want to unroot your phone, but we will be focusing on

a few ways. One of them being the SuperSU App. Here's how you can use it to unroot your phone and get it back to its original state:

Open the SuperSU app > Go to Settings > Find and click on Full Unroot > Follow the Instructions > Restart the phone.

Another way you can unroot your phone is by using File Manager. In order to do so, follow these steps:

Access the main drive of your device > System > Select bin/sbin > Delete "busybox" and "su" > Go back to System > App > Delete "superuser.apk" > Restart your device

Free Up Storage on Android 10

Don't you just hate it when your phone hits the storage cap? We definitely do, and when our phones do hit the max storage mark, it is a somewhat gut-wrenching feeling. But, when it comes to Android phones, there are a lot of ways that you can use in order to clear up space on your device and make it a lot less clutter-free. Here are some of the ways that you can use in order to clear up space on your phone:

1. **Use the Files Clean feature:** Every Android phone comes with an in-built Files App. In order to clear up space using the files app simply follow these steps- Open Files App > Tap on Clean > The app will suggest to you the things you can delete > Select the things you don't want to keep > Follow the instructions.

2. **Emptying the Trash:** Android has a feature that when you delete something, it doesn't get permanently removed, and goes to the Trash for 30 days in case you want to restore it again. In order to clear your trash, follow these steps-

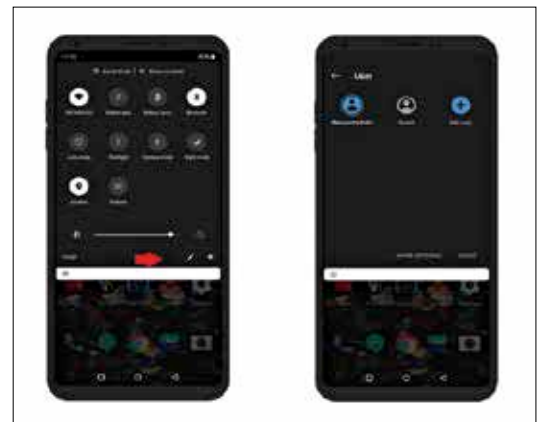

Go to Settings > Storage > Trash > Select All Items > Delete

These are a few steps you can follow if you want to clear space on your Android device and stay well below the pesky storage cap.

Set Up Guest Access

Letting someone borrow your phone and them just going through your stuff is very annoying at times. To get past that, there's this neat little feature called Guest Access that you can use in order to stop other people from snooping where they shouldn't be snooping in the first place. Guest Access allows you to let someone else borrow your phone, but does not let them access your apps, data, or send messages. In order to enable Guest Access, follow these steps: Go to Settings > System > Advanced > Enable 'Multiple Users'.

This feature keeps the basic Android apps and hides all personal apps and accounts, so you don't have to worry about other people looking at your stuff.
