

Motorola Edge 30 Fusion

If a brand cannot come with new products... What do they do? They launch a new colourway to keep the consumers distracted. That is exactly what Motorola has done with the Edge 30 Fusion. Their rationale for launching an old phone in a new colour is - It was the Pantone colour of the year. What should I say? I am truly at a loss for words right now. And not in a good way.

The same brands when they will launch a new sub-par device, which all of them do, they go on hour-long rants in their boring keynotes about how their latest offering is the "best ever" (looking at you, Apple). And, when they run out of content to talk about, what do they do? Well, they try to grab the headlines by launching the same old product but in a new colour. Apple had been doing it for the last couple of years, and now Motorola has jumped on the same old ship.

Not even worth
my time

Boring Product

Sony WF-LS900N

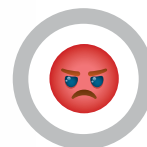

Well, it was a lazy Friday afternoon when the delivery guy came into the Digit Test Centre to deliver the Sony WF-LS900N. If you did not guess it by its name, which you should have considering how easy it is to remember products by their exact serial numbers, it is a pair of TWS earbuds made by Sony. I know, I know... The brand has been making decent (at best in my opinion) earbuds in the last few years.

I am not here to talk about their products' quality. That is what the reviewers will do. I am here to talk about their ridiculous naming scheme. When you have a product already selling by the name of the LinkBuds S, then why go and call it the WF-LS900N in India? We know that we are great at math and practically invented the number that appears twice in the name of this product. But, why do you want to subject us to the painful process of remembering this excruciatingly long alphanumeric phrase? Just name it the LinkBuds S like everywhere else, and move on!

Apple AirPods Pro (2nd generation)

When I was digging through the products that had shown up at the Digit Test Centre, one of the products that was a part of the lot was the Apple AirPods Pro (2nd generation). And, as soon as the grey logo caught my eye, I knew I was in for a treat. For a more thorough analysis, you can read our review of the AirPods. But, here's my take.

What is Apple doing!? The unit had been used by our reviewer for a couple of months while he was testing it, and in that time, the AirPods Pro (2nd generation) we scuffed as if they had been in and out of a combat! I know for a fact that it is not possible because the lazy reviewer does not leave his comfy corner in the office, which was supposed to be my spot for the entire day. So, what could be the reason, kids? It is the material choice! Mr Tim Apple decided that he will take our hard-earned money and give us a product that wouldn't even look good at the end of a year. It was the case that took the beating though, let me make it clear. Because... The earbuds with their slightly jagged edges picked up a ton of dust, leaving no room for the scuffs and scratches to be visible. How nice... Isn't it?

I would smash
that
