

Abu Simbel

This is one of the only henges in the world where the alignment of the Sun does not correspond to either an equinox or a solstice day. Instead, this temple in Egypt aligns with the Sun on two days of the year which are - The anniversary of Pharaoh Ramses II's birth (February 22) and his coronation (October 22). This temple was built around 1260 BC and stands tall at the Abu Simbel site, from which it gets its name as well.

Mumbaihenge

Yes, you read it right! The area of Lower Parel in Mumbai witnesses a cityhenge forming around the day of the vernal or March. While some may debate that it is not exactly like the ones found in Manhattan, invalidating its status as a cityhenge. But you have to make do with what you have, right?

How to spot a cityhenge yourself?

Well, the simple answer is experimentation and research. Most of the cityhenge spotters across the world were not aware of the fact that their city also could be the site to observe this phenomenon. However, with a little bit of location scouting, and the right astronomical knowledge, they were able to do it! And to great effect. We are not experts but did some research to help you potentially find a cityhenge in your own backyard!

Here's what you have to do:

- Take a grid layout of your city
- Mark out potential areas on the map where this phenomenon can be observed
- Head over to your nearest planetarium or use one of the following two tools to figure out on what days of the year the Sun aligns with the grid of your city.
Stellarium (<http://stellarium.org/>)

Satellite view of Manhattan centered on the intersection of Park Avenue and 34th Street, showing directions and local times of sunsets (solid arrows) and sunrises (dotted arrows) during Manhattanhenge (black), summer solstice (red), equinoxes (purple), and winter solstice (blue) in 2011. Times marked with an asterisk have been adjusted for daylight saving.

Photo Ephemeris (<https://photoephemeris.com/>)

- Now, just walk around those locations about a week before the set date, and find spots that would let you recreate the cityhenge and click when the time is right!
