

Optoma CinemaX D2 Laser Projector

Optoma is no stranger when it comes to making projectors. And, with their CinemaX D2 Laser Projector, they made sure that they stood up to the standards they had set for themselves. Everything from the aesthetics of the projector to its picture quality and projection, the company has pretty much nailed everything! Spoiler alert – you do not need an additional sound system when setting up the projector.

So, let's dive into our experience of using the Optoma CinemaX D2 Laser Projector, starting things off with its build and design. The projector screams quality when you first look at it. The fabric front grill covering the 40W speakers, complemented by a matte black finish (on our unit) on the rest of the body, will immediately give you an idea of why the company is charging about ₹3,50,000 for this projector. At the bottom of the projector, there's a robust set of feet,

which ensure that the projector does not rattle around when you are blasting the speakers at full volume when watching movies or videos.

Coming to the performance of the projector. The company claims that it supports HDR10, and has a 3,000 lumens stable output. And, that shows. In our time watching HDR content on the projector at the highest possible resolutions, there was not a single dull moment that we experienced. It was a smooth sailing for us, even in terms of the sound quality. Even when playing games like F1 22, which have extremely detailed textures and an intricate sound design, we did not feel that the screen was not a regular monitor and speaker setup.

In conclusion, if you have ₹3,50,000 to spend on a projector, then the Optoma D2 4K projector makes perfect sense for you to consider. There are plenty of options available in the market for you to weigh and consider, but in isolation, the Optoma CinemaX D2 projector makes for a pretty decent deal.

Monopoly Ultimate Banking Edition

While you may have seen many tech products featured in this section, our thoughts about board games usually end up going into SKOAR! However, the latest offering by Hasbro, as a part of their Monopoly line of board games, the Monopoly Ultimate Banking Edition, was something that we thought should be placed here because of what it comes packed with.

Gone are the days when the banker could slide money into their favourite player's stack of notes. With the Monopoly Ultimate Banking Edition, Hasbro has introduced digitally scannable bank and property cards. All you need to do is scan the banking cards for the four players at the start of the game on the reader that is powered by two AA batteries, and you are good to go.

All the transactions in the game are recorded using those cards. You can buy and trade property, pay rent, or take flights. Every single one of the transactions that you do is done through the digital

cards and the reader, leaving no room for conflicts. And, for those of you wondering whether the game is fun anymore or not. Well, let us tell you. It is as fun, if not more, than all the previous editions of the game. When the game showed up here at the office, we took it for a spin on multiple occasions, and every time, we had tons of fun playing with the digital cards.

And, given the geeks that we are, some of us tried to game the system, but it was virtually impossible. The structure of the game has changed slightly, but in its essence, it is the same old Monopoly game that we all grew up playing. If you are looking for something to buy for your house parties, you should definitely go for it! The only thing that you should keep in mind is that the game is meant to be played by four players. So, if you have more than four players on the table, then you'll have to team up. To be completely honest, playing the game that way does not make the experience any less fun, either.
