DIZO launches D2 and D2 Power

Dizo has launched a new series of smartwatches, namely the Dizo Watch D2 and Dizo Watch D2 Power. These smartwatches come with decent features at decent prices. The Dizo Watch D2 series will be available on Flipkart from February 10th at a starting price of ₹1,799. The original price of the Watch D2 Power is ₹5,999.

The watch will sport a 1.91 inch display with the brightness level of up to 500 nits. It also will come along with a washable silicone strap. When it comes to customisation, the smart watch has a lot of options to offer. It comes with over 150 watch faces in

addition with 120 sports modes that will attract fitness enthusiasts. However, the DIZO Watch D2 only has 24 sports modes to offer. Health tracking

is available with the DIZO Watch D2 and it also has features such as real-time heart rate monitoring, SpO2 monitoring, step and calorie counters, water drink reminders, and other sedentary reminders. This watch also features Bluetooth calling capabilities. Speaking of the battery life, the watch is packed with a long-lasting battery that can provide up to 7 days of usage without calling or 3 days when calling is enabled. On the other hand, the DIZO Watch D2 offers up to 10 days of battery life. The DIZO Watch D2 Power is available in Ocean Blue, Classic Black, Silver Grey colour variants.

iPhone 15 Ultra display tipped to output 2500 nits of brightness

Tech giant Apple is currently working on the upcoming iPhone 15. It is speculated that Apple is working on an 'Ultra Model' which will replace the current top-of-the-line Pro Max variants. The iPhone 15 series, which is expected to release in 2024, could include this change. If reports are to be believed, the iPhone 15 will include various other capabilities, but at the same time, it will be priced higher than the Pro Max models.

Further, tipsters have revealed that the iPhone 15 will offer a significantly improved display as compared to the current top-of-the-line model iPhone 14 Pro Max, as reported by Gadgets 360. Tipster ShrimpApplePro tweeted that the upcoming iPhone 15 Ultra could possibly include Samsung's next-gen display that would allow for up to 2500 nits brightness. This can be seen as a major improvement when compared to the 2000 nits of peak brightness that was offered in the iPhone 14 Pro and iPhone 14 Pro Max. Other reports also suggest that Apple is having internal

discussions over the launch of a new iPhone model in 2024. In addition to this, it is also being reported that the Cupertino Company is looking for new ways to differentiate between the 6.1-inch and 6.7-inch iPhone displays. Other features which will possibly stand out in the iPhone 15 Ultra other than its bigger display would be the possibility of an edition of a faster processor. It is also speculated that Apple might even do away with its lightning and Type C charging ports and make charging strictly wireless.
