iQoo Neo 7 announced: Will this be the next mid-range gaming hero?

iQoo has announced its latest mid-range offering, the iQOO Neo 7. In an immersion session in New Delhi, the brand showcased the iQOO Neo 7, which is launched as a successor to the iQoo Neo 6. The smartphone come with MediaTek's latest Dimensity 8200 SoC paired with up to 12 GB of RAM and 256 GB of internal storage. The iQOO Neo 7 launched in India on February 16 as the first

MediaTek Dimensity 8200-powered smartphone in the country.

The iQOO Neo 7 is launched as a gaming-centric mid-range offering and will come with many improvements over its predecessor. There will be a 6.78-inch AMOLED display with a 120 Hz refresh rate and up to 1,300 nits of peak brightness. The smartphone is powered by a MediaTek Dimensity 8200 SoC paired with up to 12 GB of RAM and 256 GB of

internal storage. The smartphone also comes with a triple rear camera setup that includes a primary 64-megapixel shooter, an 8-megapixel ultra-wide angle lens, and a 2-megapixel macro shooter. There is a 5,000 mAh battery with support for 120 W fast charging on the iQOO Neo 7 as well.

The iQOO Neo 7 is the first smartphone in India to come with MediaTek's Dimensity 8200 SoC, which is built on a 4 nm process. Its predecessor, the iQoo Neo 6 came with a Snapdragon 870 chip, which is built on a 7 nm process. The iQoo Neo 6 was a critically acclaimed mid-range smartphone for gaming. With the iQOO Neo 7, the company is saying that it has enhanced the gaming experience with a more powerful chip that has a maximum clock speed of 3.1 GHz along with other gaming-centric features like frame rate priority that keeps the frame rate stable through long gaming sessions. There is also a Motion Control feature that enables Gyroscope customisation.

During the immersion session, we got our hands on the iQOO Neo 7. From the back, the smartphone looks very similar to the iQoo Neo 6. However, upfront, we get a bigger display with thinner 1.6mm bezels and a much smaller 2.65mm chin. This makes up for a 93.11 screen-to-body ratio, as against iQoo Neo 6's around 90% screen-to-body ratio. The icon Neo 7 also felt super lightweight to hold in our hands, and the camera array now has a circular module within it, which holds the two main cameras, one is placed on the metal camera frame. The smartphone's overall frame, however, remains plastic. We can't really talk about the display quality or performance of the device, but stay tuned for our detailed review of the iQOO Neo 7.

Expected Specifications:

- **Screen Size:** 6.56" (1080 X 2400)
- **Camera:** 48 + 13 + 13 | 16 MP
- **Memory:** 128 GB/8 GB
- **Battery:** 5000 MAh
