

Redmi Note 12 Pro+

Looks like a winner

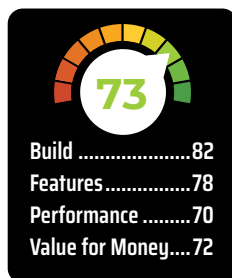

Xiaomi has built a legacy with its Redmi Note series of phones over the past few years, and in 2023, it's looking to expand that said legacy with the Redmi Note 12 series of phones. As the flagship device from the series, the Redmi Note 12 Pro+ attempts to push boundaries. But will all the hardware be enough to help it become a hit? Let's find out in our review of the device.

DESIGN

So, if we're being brutally honest, the design department is where the Redmi Note 12 Pro+ attempts the least to impress. However, what it has definitely managed to do is bring to the market a phone that has a very functional design, equipped with elements that most long-time admirers of the series will be appreciative of. We have tactile keys, a glass finish at the back and interestingly a 3.5mm jack on the top of the device to make it more appealing to buyers.

DISPLAY

As for the display, Redmi has gone in big with a large 6.67-inch Full HD+ AMOLED panel, which not only gets good tuning but also supports fast refresh rates, which can be switched between different steps. It offers immersive visual experiences, which honestly is because of two reasons: The first is that its hardware is built as such, and the second is that it is also calibrated for providing great visual experiences. From its high brightness mode rating of 1000nits to the fact that it can display up to 1.07 billion colours, there is very little that Xiaomi didn't think about while creating the 12 Pro+. Plus, you have features such as support for Dolby Vision on the phone.

PERFORMANCE

Equipped with the MediaTek 1080 SoC, the phone offers more than enough power for all that you throw at it. Games such as Call of Duty Mobile and Asphalt 9 Legends ran like a charm on the phone, with daily use apps running buttery smooth on the 120Hz fast refresh rate panel of the device. On AnTuTu, we saw the phone clocking a good score of 457561 points, while Geekbench saw it scoring 753 points in the single-core and 1985 points in the multi-core test. In Work 3, we saw it racking up a score of 11292 points. All impressive scores, might we add. The phone majorly ran cool, keeping up sustained peak performance, which is always a good sign to judge the longevity of the phone. Battery performance is also an area where we see the positive impacts of the MediaTek 1080 SoC as this chipset generally runs cool, and as such, does not drain too much battery. And when you finally run out of charge, you can use the 120W fast charger to top up the battery in nearly 22 minutes.

CAMERA

The phone comes with a massive 200-megapixel Samsung ISOCELL HPX primary camera sensor, which is paired with an 8-megapixel ultra-wide-angle camera and a 2-megapixel macro sensor. When fed with adequate light, resultant shots come out with good dynamic range and punchy colours. And when the light is low, the 1/1.4-inch sensor ensures the images don't look dark or noisy because of processing. However, this is without the Night Mode. With it on, resultant shots end up appearing over-processed and as a result a bit too soft. Plus, they also look a bit artificially brightened, which honestly, is never a good look for an image. The ultra-wide lens also does a decent job, but the images clicked using this lens also had a slightly warmer tone to them when compared to the ones of the primary lens. As for the macro-lens, the performance is just about passable, but only in well-lit environments. Apart from these, we also get a 16-megapixel lens that's again decent at its job. The lens mostly captures accurate skin tones, with Xiaomi also managing the skin tones well.

VERDICT

The Redmi Note 12 Pro+ is a very good upgrade if you're using a previous generation Note series device from Xiaomi. Even if you're not looking to upgrade from a Redmi Note device, and your budget happens to be around the Rs 30,000 mark, then know the Note 12 Pro+ still makes a lot of sense for you. The only thing holding back the device is its design, which honestly does not do much to tilt the scales in Note 12 Pro+ favour when it's compared to some of its rivals in its price range.
