Managing Director,  
Nikon India Pvt. Ltd

## In conversation with Nikon India

**Mr. Sajjan Kumar, Managing Director, Nikon India Pvt. Ltd gives his views and insights into the Indian camera market, Nikon's vision of the future and the camera industry as a whole**

**Ali Akbar Merchant** | ali@digit.in

**Q What's your all-time favourite camera? It doesn't have to be one from the current lineup of Nikon cameras, it can be any camera?**

**A** I was initially using the Nikon D750 and of late I have been using the Z6 II and Z9. I've personally used the D750 quite a lot. And even before that, I have fond memories of the D60 and D90.

**Q Nikon recently announced it'd discontinue DSLR cameras. How does a camera company make such a big and impactful decision?**

**A** I think maybe you're referring to some international market-related news. We still have four DSLRs and all are moving well. Not too long ago the D6 was launched, too. So as a brand, we enjoy the strength of both the D and Z systems. We are fortunate enough to have those brand loyalists from the DSLR system and are happy with the mirrorless systems as well. Yes, you might see more traction towards mirrorless because of consumer demand, or making that (mirrorless) lineup more strong in terms of lenses as well as body.

**Q Any predictions on the next big thing in terms of camera evolution? What's your vision of the future?**

**A** I'd say evolution is mainly as per consumer requirements and understanding them well and giving them a solution that works for them. So what we have seen in terms of customer's preferences, especially in the case of mirrorless cameras, is that of a lighter body. The sensor difference between DSLRs and mirrorless cameras may not be huge, but some consumers prefer a lighter body and a different form factor which is one of the changes we have seen between DSLRs and mirrorless. What we foresee in the future is a more connected device like SnapBridge, where the moment you capture a moment on a DSLR or mirrorless camera you instantly see it on a smart device, have the ability to upload

**Nikon Z9**

it online, and do much more. In the same way a lot of AI-enabled features are also coming to digital cameras and digital photography in general. Based on the understanding of the market, the kind of environment where you are shooting in, the kind of lighting conditions and so on. I think the good old digital camera is becoming more and more intelligent and certainly work in this direction will continue. So future cameras will become more AI-enabled as well as more connected.

**Q Why not have a smart system on the camera itself? Like an Android**
