

Apple iPad/iPad OS

Turn your Apple iPad into the ultimate productivity machine

It can do it all if you want it to

Sushant Talwar | feedback@digit.in

The iPad is believed to be the ultimate productivity tool by many, one that could even herald the end of the era of traditional computing. Designed for portability, these tablets from Apple provide you with enough software-based tools you need to get through your work day and depending on the model of choice, also bring with them enough raw computing power to take on some of the most

advanced personal computing machines available in the market right now.

While the latter plays an important part in helping the iPad stand out as a serious productivity tool, it's the former that firmly establishes the Apple-branded tablet's presence as a good portable productivity device. But fret not if good isn't good enough for you. Read on to know a few tips and tricks that'll help improve your productivity workflow

and turn your iPad into the ultimate productivity device.

For the scope of this guide, we'll focus on tips and tricks that directly tie into Apple's latest operating system for iPads, the iPadOS 16. This new update makes iPads more productivity-centric than ever by introducing new ways to collaborate via Messages, Mail, iCloud Shared Photo Library, multitasking and more. Plus depending on your model of choice, we'll also share some really interesting tips that you can use to improve your workflow with the new Apple Pencil.

Master Multitasking

Because of its large display, iPads can be used to unlock new multitasking experiences by allowing the user to work with multiple applications at the same time. This can greatly enhance workflow and improve productivity.

■ One of the features that one can use to get the best out of when it comes to multitasking is Split View. Using Split View, two windows from the same app or even two different apps can be opened by splitting the screen into resizable sections. You can also create Split View spaces in one screen through the App Switcher, which can be accessed by swiping up and holding from the bottom of the screen and combining two apps to create a Split View by dragging one app over another.

Split View can change the way you use your iPad and improve workflow as it allows you to drag and drop text and images from one app to another while you're in this mode. To do this, all one has to do is select the relevant content and then hold your finger down on the selection until it has an outline around it. Once this is done, all you need to do is simply drag and drop this content into the other app you have open.

■ Another cool feature that you get with the iPads running iPadOS 16 is Slide Over window. With this, a normal app window can be switched to a Slide Over window. This allows the user to continue using a particular app with another
