

Logitech has been a mainstay in the business of making PC peripherals, and their products, like the G502 mouse, have become an icon in their own right. There was a Lightspeed variant of the G502 already in the market, commanding its own reach amongst the gamer kind. So, when the company released the G502 X Plus, we were really interested to see what direction the brand was headed in with this product, and when it showed up at the Digit Test Centre, we put it through our rigorous testing process, and here's what we found out.

Specifications at a glance

- USB-C Charging
- Low-friction PTFE feet
- Weight: 106 g
- Height: 131.4 mm
- Width: 41.1 mm
- Depth: 79.2 mm
- Sensor: HERO 25K
- Resolution: 100 – 25,600 dpi
- Max. acceleration: >40G
- Max. speed: >400 IPS

- Battery life - Constant motion 130 hrs (37 hrs RGB on)
- Colours Available: Black and White

Build and Design

As soon as one reads the name of this mouse, the G502 prefix instantly gives away the fact that this mouse will have a design that is inspired by the trusty G502. However, given that this mouse is an upgrade over the previous iteration of the mouse in the series, there are some noticeable differences in the design of the mouse.

The button combinations remain the same for the most part, including the infinite scroll wheel. The biggest noticeable change with the Plus variant of the G502 X is the RGB lighting on the mouse. The brand has released two wireless variants of the G502 X - the G502 X Lightspeed and the G502 X Plus. The main difference between the

two is the RGB lighting, which is available only on the Plus variant. They are otherwise the same mouse for all intents and purposes. Of course, they've done a pretty phenomenal job with the RGB on the Plus, as can be seen in the images.

Coming to the overall shape and feel of the mouse, it is essentially the same as that of the OG G502. If you have used the older version of the mouse long enough, then you will feel at home right away. The sniper button on the side, right above the

thumb rest, is modular, meaning that it can be removed and added to the mouse as you please. It can also be inverted to be either longer or shorter, keeping in mind different thumb lengths and comfort, which was a nice touch in our opinion.

The body is made with the usual Logitech sturdy, and lightweight plastic with a combination of

SKOAR!
