Moto Razr 2023 leak suggests 3 notable differences

Moto Razr 2023 design has leaked courtesy of TechOutlook and Evleaks. It tells us the new Moto Razr is going to look different from its predecessor, and the incumbent flipping foldables in the market. That includes the Oppo Find N2 Flip and Samsung Galaxy Z Flip 4. Let's compare the three devices from a design standpoint as that's pretty much the only thing we know about the upcoming Motorola folding phone.

1. Bigger display

Moto Razr 2023 seems to have a bigger cover display than Samsung Galaxy Z Flip 4 and Oppo Find N2 Flip. Oppo Find N2 Flip has a vertical screen but it also appears smaller in dimen-

sion compared to the Moto Razr's cover screen.

2. UI and notification system

The leaked Moto Razr renders also show what looks like a new notification management interface. We will have to wait to see how interactions with notifications work on its larger window. In comparison, the Oppo Find

N2 Flip offers smart widgets for things like quick phone settings and utilities. It also shows previews of photos and videos. Well, Z Flip 4 also offers cute and colourful watch faces, a glance view for notifications and quick toggles for important settings.

3. Camera placement

Moto Razr 2023 has got two rear camera rings like its rivals but while Samsung and Oppo have arranged the cameras vertically, Motorola has placed them horizontally. Unlike the other two, Moto Razr has its cameras within the cover screen. So, there are two cutouts for the lenses and one for the flash. Another render shows the main screen of the device without any camera cutout or notch. Could Motorola equip the new Razr with an under-display camera? Only time can tell. We will keep you posted on the leaks and rumours about the device leading up to its launch."

Xiaomi 13 Ultra schematic design and Leica camera branding leaked

Xiaomi 13 Ultra could be unveiled as the successor of the Xiaomi 12S Ultra as teased by Xiaomi. The Mobile World Congress will be held at the end of this month and Xiaomi recently teased holding an event at the MWC. This might be the indication towards Xiaomi launching the Xiaomi 13 series which includes the Xiaomi 13, Xiaomi 13 pro and Xiaomi 13 Lite however there is no clear hint about the Xiaomi 13 Ultra.

According to recent leaks on Weibo, a popular micro-blogging platform in China, the Xiaomi 13 Ultra schematics and back camera images showing Leica branding have surfaced, however, we advise

our readers to take this information with a pinch of salt. There are chances of this information being true, however, it could also be photoshopped, we never know.

Based on the leaked schematic design, we can see the device with a black circular design at the back featuring 4 cameras, an LED flashlight module and

the Leica branding in the middle. For those who don't know, Leica is a German company that manufactures cameras, optical lenses, photography lenses etc. Last year, in May 2022, Xiaomi announced its partnership with Leica and launched Xiaomi 12S Ultra equipped with Leica cameras. "
