

New launches

Realme GT 3

Realme GT 3 has launched at Mobile World Congress, 2023 in Barcelona. It is a rebranded variant of the Realme GT Neo 5. It supports a 240W adapter which is the world's fastest charging option. However, that's just one of the key features of this phone. Let's know what makes it worth a headlining product from Realme at MWC 2023. Realme GT 3 is the first globally available phone featuring a 240W fast

if you are charging the device, the cooling mechanism brings down temps by 1.6°C, thus reducing the charging time as well by 30 to 45 seconds. Now, it's not just about internal engineering, the company has put some attention to designing the phone to give it a unique look.

This includes the glass unibody that is curved by the edges and very thin bezels on the front. The back side imitates pipelines carrying micro-liquid, along with a "magnetron-spluttering coating where metal and alloy are deposited in tiny amounts onto the case using an electric field".

Nokia G22

HMD Global reportedly partnered with iFixit to develop the Nokia G22 keeping repairability as the core motto. As for specs, the G22 packs a Unisoc T606 chip, a 6.5-inch 90Hz IPS LCD panel, a 50MP primary camera, a 5050mAh battery with 20W wired charging, among other things.

Nothing Phone (2)

Nothing CEO, along with Christiano Amon, chief of Qualcomm teased the Nothing Phone 2. What's more interesting is the news that the Phone 2 will be engined by Qualcomm Snapdragon 8 series processor. This could be either Snapdragon 8 Gen 2 or Snapdragon

8+ Gen 2 chipset. The other rumoured specs are 12GB of RAM, 256GB of onboard storage, a 5000mAh battery and 120Hz AMOLED screen. Let's if Nothing Phone 2 sticks to the glyph interface and transparent design of the first phone.

Motorola Moto RIZR

Motorola showed off the Moto Rizr, a rollable smartphone which

in the normal state has a 5-inch plastic OLED screen and when you tap the right-flanking button, the screen rolls up vertically into a 6.5-inch display phone. Pressing the button again brings back the phone to its normal 5-inch state.

charging solution. The phone packs a 4,600mAh battery which can be topped up full in 9 minutes and 30 seconds as per the company estimations. On the front of the phone, there is a 6.74-inch AMOLED panel with 144Hz refresh rate, FHD+ resolution, HDR10+ support, and 10-bit colour depth. You also get Android 13-based Realme UI 4.0, WiFi ac, Bluetooth 5.3, USB-C 2.0, NFC, Infrared, and up to 16GB RAM and 1TB storage. Realme GT 3 8+128GB model is priced at \$649 (~₹53,557) in the global markets.

ONEPLUS 11 CONCEPT

OnePlus calls the Active CryoFlux to be a miniaturized form of the cooling tech within gaming PCs. In effect, it can tamp down the temperature by up to 2.1 °C during gameplay, thus increasing the frame rates by up to 3 to 4 fps. And

TECNO MEGABOOK S1

The new Tecno laptop that the company has just debuted at MWC, it is an updated laptop version that was first launched in December last year. The MegaBook S1 2023 will be powered by the latest 13th-gen Intel

Core processor. In addition to this, it also boasts new features like PC SwiftTransfer through hand gestures. Users will also be able to share data, manage files, use multi-screen as well as share a reverse network across Tecno's digital
