2023 Android Flagships Compared: Battle of Big Guns Begins

We tested the iQOO 11, OnePlus 11, Samsung Galaxy S23 Ultra, and the Xiaomi 13 Pro

Darab Mansoor Ali | darab@digit.in

We are just about three months into 2023 and the Android flagship battle is already hot. Flagship smartphones from iQOO, Samsung, OnePlus, and Xiaomi have already made their way to India, making for a super exciting start to the premium smartphone segment this year. These flagship smartphones have quite a lot in common. All of them are powered by

Qualcomm's Snapdragon 8 Gen 2 chip, (the Galaxy S23 Ultra has a custom variant of the Snapdragon 8 Gen 2), all of them have premium LTPO AMOLED displays, and all of them boast of powerful camera setups.

However, each of these flagships have their own strongpoints and differentiating factors. For example, the Samsung Galaxy S23 Ultra has the custom chip and a new camera. OnePlus and Xiaomi have their collaborations

with camera brands like Hasselblad and Leica, respectively and the iQOO is all about performance with the BMW M Motorsport-inspired offering. All these phones, however, claim the best of the best when it comes to an Android flagship experience. But which of them is really the best or suits what kind of user, let's find out.

So we at Digit put the iQOO 11, Samsung Galaxy S23 Ultra, OnePlus 11, and the Xiaomi 13 Pro head-to-head against each other to see which of these flagship smartphones is the most powerful. During our test, we ran several benchmarks on each of these smartphones, tested out their battery and charging capabilities, and played several games on each of them. Further, we tested their
