

fast during GPS navigation, in tasks like gaming and streaming, the Galaxy S23 Ultra doesn't drain battery easily.

The iQOO 11 drained more battery while streaming videos, but the smartphone sustained well in areas like gaming or GPS navigation. The OnePlus 11 showed a very balanced battery performance across tasks and durations, as well as the Xiaomi 13 Pro. However, the latest Xiaomi flagship drains battery slightly faster between 75% to 25%, our video loop test showed.

Now, while the Samsung Galaxy S23 Ultra's battery backup is the best among these four, it is soon mired by the slow charging. The Samsung flagship charged from 0 to 100 percent in 84 minutes, which is the slowest. The iQOO 11 was the fastest and charged from 0 to 100 in just 27 minutes.

iQOO 11 vs Samsung Galaxy S23 Ultra vs OnePlus 11 vs Xiaomi 13 Pro: Verdict

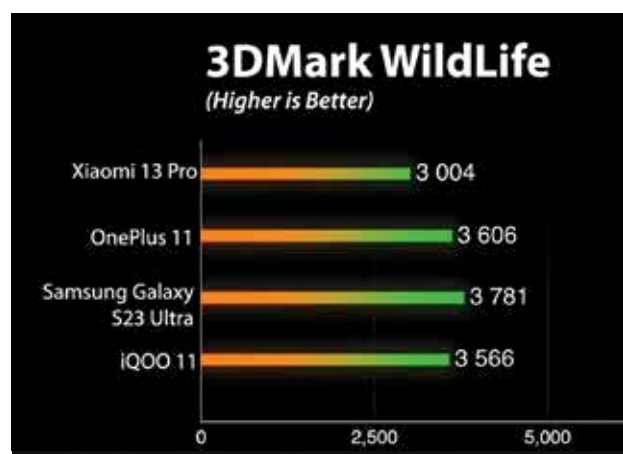

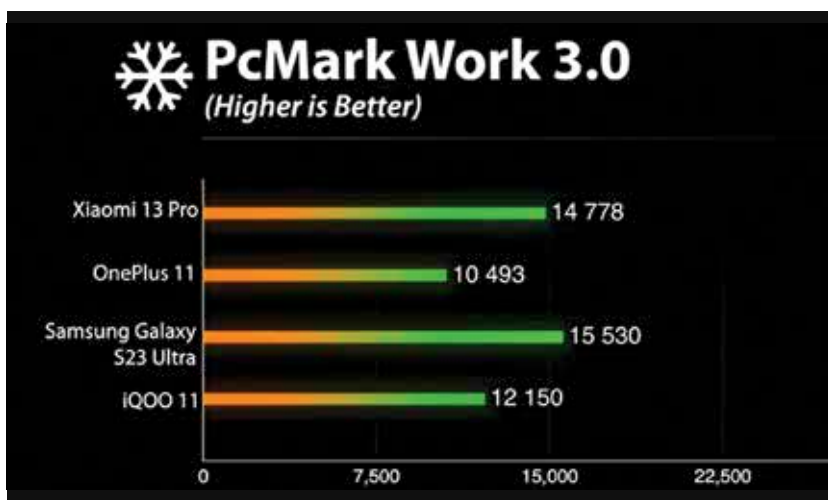

So after analysing the displays and performance on all the Android flag-

ships that have launched in 2023 so far, it is fair to say that each smartphone is equally good when it comes to performance and gaming. Overall, there is not much to differentiate these Snapdragon 8 Gen 2-powered flagships in terms of performance. Some offer better GPU or gaming performance, some get tasks done faster during your day-to-day usage.

The display on all these devices are good, but our tests showed that the Xiaomi and Samsung flagships leave the competition behind in terms of colour accuracy. However, the Samsung edges past Xiaomi (unsurprisingly), given the higher brightness and a

more vibrant colour profile. To conclude, the Xiaomi 13 Pro and the Samsung Galaxy S23 Ultra are more camera-centric devices, while the iQOO 11 is focused towards gaming and performance. The OnePlus 11, on the other hand, banks on its lineage, partnership with Hasselblad, and a rather loyal consumer base, without having much to offer in terms of a differentiating factor.

So the answer is clear. If you want a proper flagship gaming and performance experience, any of these smartphones are good to go. However, if you want a more camera-centric device, the Samsung Galaxy S23 Ultra and Xiaomi 13 Pro offer way more than the other two in competition. But if you want a smartphone purely for gaming and don't care much for the cameras, the iQOO 11 among these is the best option. The OnePlus, you ask? Well, it offers a well-balanced experience, but we can't call the smartphone better in any of the areas we tested it in. **d**
