

Xiaomi 13 Pro

Good cameras come at a 'heavy' cost

The Xiaomi 13 Pro also introduces a new design language from Xiaomi, with a square camera module housing a new sensor, that sits on the top left corner of the ceramic back panel. So the smartphone looks and feels good in your hands, but how good is this Android flagship offering in real life? Let's find out.

DESIGN

The design of the Xiaomi 13 Pro is good. It isn't huge like some of its competitors, and on-hand usage on the smartphone is very much possible. There is a noticeable 2mm chin and the seemingly bezel-less display up front. At the back, Xiaomi has changed things. There is a black square-shaped camera module on the top left corner of the back panel. The camera module, is too thick, making the smartphone slant up while sitting on a flat surface. Overall, the smartphone looks very good and premium, but the design could have been given a bit more thought. The camera module is a bit too thick, and the smartphone is very heavy..

DISPLAY

Coming to the display, Xiaomi has given three colour profiles for the 13 Pro. These include 'Natural, Vivid, and Saturated.' This display also offers a good dynamic range. We also ran a Calman test on the Xiaomi 13 Pro display and the display showed an average Gamma of 2.214 in Greyscale, so that is very good. This basically means that the RGB balance on this

display is good. Further, the average colour temperature came out to be 6578. In grayscale, the Delta error came out to be 2, which is good for a smartphone display. Surprisingly, the primary and secondary colours showed almost no error, meaning that this is as good as a display could get. The average Delta E was 1.74, while the max Delta E was 2.5, which is brilliant. In our Lux Meter test, the display showed a maximum luminance of 968 nits and a minimum luminance of 11 nits. That is far from the brand's claim of 1900 nits.

PERFORMANCE

Coming to performance, this is where the Xiaomi 13 Pro shares a lot with other Android flagships of this year. Benchmark scores include a 12,59,912 score on AnTuTu. The only 2023 flagship that scores more than the Xiaomi

13 is the iQOO 11, which scored 12,72,241 points on AnTuTu in our review. On Geekbench, the Xiaomi 13 Pro scored an impressive 1384 points in the single-core test, and 5153 in the multi-core score. On other benchmark tests like PC Mark Work 3.0, the Xiaomi 13 Pro scores 14,778 points. In a graphics-based benchmark test 3D Mark, the Xiaomi 13 Pro scored 3004 points, lowest among the other Snapdragon 8 Gen 2-powered smartphones released in India. Further, on GFXBench, the 13 Pro again scored well, showing the highest score in two out of three tests, as compared to other Snapdragon 8 Gen 2-powered smartphones. On Androbench storage benchmark, the

13 Pro showed the fastest read and write speeds overall. Apart from benchmarks, the experience was also very snappy, very fast. Gaming experience is also very good. The smartphone opens games as fast as you'd imagine on a smartphone, all games run on highest-possible settings, and things are quite smooth.

BATTERY

The battery is also very good on the 13 Pro. In the video loop test, the 13 Pro lasted 12 hours or 720 minutes, which is not too bad.

CAMERA

Talking about the photos, the Xiaomi 13 Pro's primary shooter clicks wonderful images. The 1-inch allows an abundance of light in your pictures, so the details are just brilliant out of the primary shooter. Images are super detailed even in low-light conditions and in well-lit scenarios, the smartphone's black and white images are epic. It manages greys and dark shadows very well, even in low light conditions. Even in close frames of subjects, the primary camera nails the details and textures on your subject. Coming to portraits, this is also where the 13 Pro does well. However, you get a "swirly bokeh" effect. The one drawback of this advanced camera setup is that this is the reason for this overly thick camera module.

VERDICT

Overall, the Xiaomi 13 Pro is a brilliant performer. The only thing going against the 13 Pro is its weight. It is a flagship with no real weaknesses. There are some minor kinks here and there, which would be interesting to see how Xiaomi deals with.

—Darab Mansoor Ali

SPECIFICATIONS

Chipset: Qualcomm Snapdragon 8 Gen 2 | GPU: Adreno 740 | OS: MIUI 14 based on Android 13 | Display: 6.73-inch WQHD+ E6 AMOLED | Display Refresh Rate: 120Hz | RAM: Up to 12GB | ROM: Up to 256GB | Cameras (rear): 50MP + 50MP + 50MP | Cameras (front): 32MP | Video: 8K @ 30fps | Battery: 4820mAh | Charging: 120W
