

vivo V27 Pro

A worthy successor to a quirky mid-ranger

₹37,999

Vivo has come up with yet another mid-range smartphone with a curved display and a colour-changing back panel. The Vivo V27 Pro has been launched as the successor to the Vivo V25 Pro, with several improvements like a new chip, a more lightweight design, along with several new camera features. However, does the Vivo V27 Pro offer enough to justify its price of ₹37,999? Let's find out.

DESIGN

When talking about the design of the Vivo V27 Pro, we see a tried-and-tested design approach from Vivo, and the V27 Pro takes a lot from its predecessors in terms of design. This time around, we see a new camera module and a different chassis, as compared to last year's Vivo V25 Pro. The smartphone has a curved display, along with a frosted glass back, which changes colours when exposed to sunlight.

DISPLAY

The display is very similar to what we have seen on other Vivo mid-range smartphones. Given that this is an AMOLED display, the colour accuracy is good and the display feels quite premium while watching videos and movies. The RGB balance seems a bit on the cooler side on this display, but the colours remain accurate. The display looks and feels quite premium in most scenarios. It is also sharp, meaning there are no rough edges or any signs of pixelation. We also get a 120Hz refresh rate, so this is also a very responsive display.

PERFORMANCE

This time around Vivo's V-series mid-ranger comes with specifications that match the smartphone's price. The performance jump is significant, as compared to the predecessor. The Vivo V27 Pro showed good numbers in all the benchmarks we

ran on the device, coming close to (and even beating in some tests) one of the most powerful mid-ranger in the market currently, the iQOO Neo 7. In AnTuTu, the Vivo V27 Pro scored 848939 points, which is one of the highest on any mid-range Android device we have tested in the past year. On Geekbench, the Vivo V27 Pro beat its gaming-centric cousin in the single-core test, the iQOO Neo 7. In GPU-based benchmarks, the Vivo V27 Pro actually beats the iQOO Neo 7 according to our records. In the storage speed tests also, the Vivo V27 Pro showed good numbers, but wasn't the fastest, like we saw in several CPU and GPU-based tests. Coming to gaming, here also the Vivo V27 Pro surprised us with its performance. Apart from benchmarks also, the gaming experience on the Vivo V27 Pro is as good as it gets on a mid-range device.

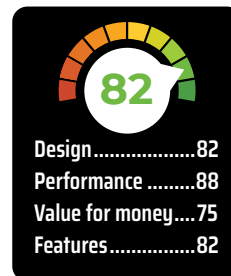

CAMERA

This time around, Vivo has also given a very India-centric camera feature, which is a wedding mode, placed within the portrait mode of the smartphone. The camera on the Vivo V27 Pro is pretty good. The images out of the main shooter are sharp and nicely detailed. We get a primary Sony IMX766 shooter with optical image stabi-

lisation. This shooter clicks nice images in ideal lighting conditions, where the colours and dynamic range on the photos is nice, and the images don't normally lose detail. The 50MP primary shooter also adds a bit of depth on its own, so that's a good thing. In low light conditions, the camera captures a lot of light from any source it can find, so the colours and details in low light images are good. The images in ultra-wide, however, aren't as detailed or sharp as the ones from the main shooter. The portraits on the Vivo V27 Pro are brilliant. The edge detection is on-point, and the background blur is also very good.

BATTERY

Coming to battery, the backup on the Vivo V27 Pro is also pretty good. During our usage, the V27 Pro easily gave me over 7 hours of on-screen time, which basically means more than 1.5 days of usage. Apart from the good battery backup, we also get 66W fast charging, which charged the Vivo V27 Pro from 0 to 100 percent in about 46 minutes, in to our test.

VERDICT

With a Rs 37,999 starting price, the Vivo V27 Pro competes with the likes of the OnePlus 11R, Moto Edge Fusion, Samsung Galaxy A73 and the Realme GT2, which are more common. The Vivo V27 Pro, on the other hand, is more of a camera or design-centric offering, which doesn't appeal much to those who are looking for the best performance for their money. However, given Vivo's massive offline sales channel, the colour-changing will persuade many.
