Advice for women in tech?

Kavitha Prasad, Intel

Don't let anyone dictate what you can or cannot achieve. It's your career, and you pave your path on your terms. Be confident, be assertive, and never take "no" for an answer if you truly believe in something. Be open to learning and remember the power of saying "I don't know." Set strong boundaries for yourself and never back down from challenges. And lastly, always pay it forward.

Rituparna Mandal, MediaTek

I swear by the motto 'stay relevant and keep learning'. It's necessary that aspiring women leaders keep up with the change. Work on making yourself relevant for today and future-ready for tomorrow. Maintain a thirst for learning, know your surroundings, foster a genuine spark of interest and be passionate about what you do, for these traits will surely make you an expert in any field you choose.

Srikrupa Srinivasan, Dell

I want to tell all the women out there to think differently. There will be new roles, constantly changing environments, difficult decisions, but women will need to overcome these challenges. Look at your career like a cricket match. If you want to have a career and a life, balance it out saying these are my work hours, these are the weeks I need to play a T20 or a one-day match, and rest like a test match with equal family time.

Irina Ghose, Microsoft

The first thing is that you should be vocal and ask for what you want and need. Do not assume that everybody knows about your inherent capabilities. The accountability to alter perceptions and carve your own growth trajectory rests with yourself. Intentionally building and nurturing diverse teams can create a ripple effect on the careers of generations of women. You should always dream big, take unconventional routes, be a constant learner, create vibrant networks and believe in yourself to conquer new peaks.

Priya Murthy, Acer

My advice is to stay focused on your profession. This is an excellent time for women to work in technology. Corporate policies are evolving, and a greater emphasis is being placed on getting women into technical and leadership roles. Be self-assured in your abilities to convey information, thoughts, and feelings. Discover how to communicate effectively so that others can hear and understand you.
