

Gaming Challenges and Opportunities?

Charuvi Agrawal

India has a very large young population, which can allow for a massive industry spawning hardware (gaming requires very high-end PCs), software development and development of unique IP. India needs to have its own ecosystem of console and mobile gaming. Secondly, we need good game makers who create enjoyable games. Indian gaming has the potential to become an insurmountable industry, if it gets the required support from the government and entrepreneurs.

Sana Saiyyada

India is one of the fastest growing gaming markets with one of the largest gamer bases. What the industry desperately needs is regulations, government support which we have now and most importantly thought leaders. Industry experts have this unsaid responsibility to provide direction, platform for people to nurture their skill and talent.

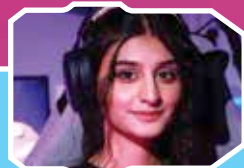

Keerti Singh

Unlike other industries, in mobile games, you are competing with the top global games and gaming talent from day one. Users have a choice to play your game or Clash of Clans or PUBG. Hence, the content that we make for Indian gamers needs to be world class!

Annu Koul

There is no profile in game development where we do not see women today. Increasingly we have seen more women picking up gaming as a hobby as well as a career path. The gaming industry is definitely a great place for women who want to break away from traditional career paths to take the road less traveled to create something of their own.

Payal Dhare

The gaming industry needs to have more women in leadership roles and as part of development teams. The industry needs to promote a culture that is inclusive of women and promotes gender equality. Gaming industry should create a safe and respectful environment that does not tolerate harassment or discrimination of any kind. We need to create more games that feature female protagonists and storylines that resonate with women gamers.
