

TP-Link Archer AXE95 AXE7800 Tri-Band Wi-Fi 6E Router

Say hello to a whole new band

The TP-Link Archer AXE95 is one of the few Wi-Fi 6E routers that you can buy in the market right now. And if you're looking to upgrade your old Wi-Fi router, then this is a flagship-level router that isn't extremely pricey. Here's our review.

BUILD QUALITY

Coming to the build quality of the AXE95. It's made of sturdy high-quality plastic and feels solid and well-built. Under the front face, there are three easily accessible buttons for toggling the Wi-Fi, the LED indicator, and a third button for WPS. The right face has a USB 3 port for connecting a shared storage device. The rear I/O panel comes with a USB 2.0 port, power socket and button, and reset pinhole followed by all the RJ45 sockets. You've got multiple WAN ports on the AXE95 with one being 2.5 G and the other being 1G. All the LAN ports are 1G. On the inside, we see a massive heatsink covering the length of the PCB. We have support for dual 2X2 radios and the AXE95 is configured to use this chip for the 2.4 GHz and 6 GHz bands. We also get 2x antennae for the 2.4 GHz and 6 GHz bands and 4x antennae for the 5 GHz band. Again, the hardware powering the AXE95 is pretty much top-of-the-line.

USER INTERFACE

The interface provides access to all the router's features, including network settings, security, and parental controls. You can also monitor your network's status along with all your connected devices. For folks who are more comfortable using an app to configure devices, TP-Link does have the Tether app which

is available on Android and iOS. And if you're like the geeks at Digit who like to get their hands dirty with the advanced settings, then the full gamut of network settings can be accessed via the web interface.

PERFORMANCE

Now, let's talk about the most important aspect of the TP-Link ARCHER AXE95 - its wireless performance. The router can deliver speeds of up to 2402 Mbps on the 6GHz band, making it great for streaming 4K videos, and other bandwidth-intensive activities. Since it's not congested as the 2.4 GHz and 5 GHz bands, it might even be good for online gaming. The downside of the 6GHz band is that it penetrates much less than the 5 GHz or the 2.4 GHz bands. So if you have a line of sight, then you should have the best experience. We tested the TP-Link ARCHER AXE95 in a mid-sized office with multiple walls and obstacles. On the 2.4 GHz and 5 GHz bands, the router was able to provide stable and fast internet connectivity to all our devices, including smartphones, laptops, and PCs. On switching to the 6

GHz band, it was simply not visible to a lot of devices. We used flagship smartphones with the latest Snapdragon 8 Gen1 SoCs, and none of them could spot the 6 GHz band. Even laptops with the Intel AX210 and AX211 Wi-Fi modules could not spot the 6 GHz band. We finally managed to connect using the ASUS ROG CROSSHAIR X670E HERO which comes with the AX210 Wi-Fi module. So the 6 GHz band is yet to be widely supported by a lot of flagship devices that exist in the market. Once released, you should see software updates for a lot of devices opening up support for the 6 GHz band.

VERDICT

Overall, we like the TP-Link ARCHER AXE95 router. It's well-built, and easy to use, and the new 6 GHz band means that you can enjoy uncongested Wi-Fi.

The only problem is that there are very few devices available in India that can actually take advantage of the latest Wi-Fi technology. But, there's a little tradeoff here between the available features. So, if you're in the market for a new router, the TP-Link ARCHER AXE95

is definitely worth consid-

ering. Hopefully, sooner than later, the 6 GHz band should open up and allow you to make the most of your router.

—Mithun Mohandas

SPECIFICATIONS

Processor: 1.7 GHz Quad-Core CPU, Ethernet Ports, 1x 2.5 Gbps WAN/LAN Port, 1x 1 Gbps WAN/LAN Port, 3x 1 Gbps LAN Ports, USB Support 1x USB 3.0 Port, 1x USB 2.0 Port | Supported Partition Formats: NTFS, exFAT, HFS+, FAT32 | Supported Functions: Apple Time Machine, FTP Server, Media Server, Samba Server | Buttons: Power On/Off Button, Reset Button | Power: 12 V = 2.5 A | WiFi Encryption: WPA, WPA2, WPA3, WPA/WPA2-Enterprise (802.1x) | Guest Network: 1x 6 GHz Guest Network, 1x 5 GHz Guest Network, 1x 2.4 GHz Guest Network | VPN Server: OpenVPN Server, PPTP VPN Server, L2TP VPN Server | VPN Client: Open VPN Client, PPTP VPN Client, L2TP VPN Client | Protocols: IPv4, IPv6
