The Samsung Galaxy Book3 Pro 360 is one such device. It is a 16-inch thin and light laptop which also has a 360-degree hinge and is focused on productivity. So what is the Samsung Galaxy Book3 Pro 360 all about and more importantly, who is it for?

DESIGN AND BUILD QUALITY

The thin 16:10 aspect ratio on this laptop seems reminiscent of the LG Gram 16. Meanwhile, the 2-in-1 touchscreen display with a 360-degree hinge is similar to what you'd find on similarly sized gaming laptops. The laptop's build quality is solid overall but there are some areas where you'll likely see some flex. The keys here are not very clicky in the sense that they have less travel. Moreover, they are geared towards productivity and will remind you of a MacBook's keyboard. The touchpad still includes no buttons and the left and right clicks continue to function as the previous generation.

DISPLAY

In terms of colour volume though, we found the maximum DCI-P3 colour volume to be around 115 per cent in the CIE l*a*b testing as well. We tested the Colour accuracy in the DCI-P3 profile and found the average Delta E value to be 2.7 and a maximum Delta E value to be 5, which is really good for a laptop display. We tested the colour gamut coverage in the DCI-P3 and sRGB colour space, which are mostly primarily used, and found them to be 100 per cent in both cases. Additionally, the Greyscale Delta E value and the RGB balance as well in both colour spaces were at optimum levels. The RGB balance in the grey scale of the display is also very good in both of these colour spaces. Meanwhile, the speakers are downwards facing and they do sound

loud as long as they're kept on any flat surface. Moreover, they lack bass and although the sound is pretty clear the overall quality of the audio could have been a bit better.

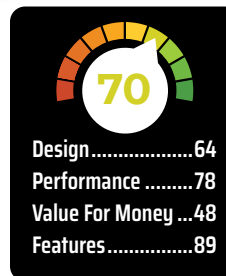

PERFORMANCE

The EVO tag officially means that this laptop can give a tested battery life of 9.5 hours. In our benchmark test, we found the figure to be 9 hours and 20 minutes with some tweaks to the brightness and battery performance settings. The performance of the 1TB SSD onboard delivers a 5201 MB/s read speed and a 4954.92 MB/s write speed. In the Cinebench R23 benchmark, the laptop scored 10485 in the multicore score and 1711 in the single-core test. And when you perform the same test to check the laptop's sustained performance, the multicore score drops to 8140 and the single core score more or less remains the same. The fan noise is kept to a minimum at room temperature and with the laptop running in high-performance mode, the fans rarely become audible under most normal use conditions. The laptop scored around 5400 in the PC Mark 10 Extended test, which extensively tests a device's

productivity, digital content creation and gaming capabilities. The laptop scored specifically high in the photo editing test, video conferencing and web browsing test. The laptop scored decently in gaming and overall Digital content creation due to a processor which is primarily focused on efficiency and the lack of a dedicated GPU.

TOUCH DISPLAY PERFORMANCE

The absence of palm detection is something which professional artists will likely feel missing. Moreover, the Samsung S Pen, a perfectly apt device in itself, is not as comparable to something like an Apple Pencil. The 360-degree hinge allows you to draw economically and the solid hinge movement only makes this feature even better. So overall, the touch capabilities of the Samsung Book3 Pro 360 are good for a laptop but not comparable to a primarily touch-based device like a tablet.

VERDICT

The Samsung Book3 Pro 360 is well-built, the keyboard and trackpad work very

together in beautiful sync and the subtle redesign of the touchpad takes the ergonomics of the laptop to a new level. Go for the Samsung Book3 Pro 360 for its high battery life, great keyboard combination, high battery life and colour-accurate and vivid display. It is currently priced at Rs 1.79 lakh on the Samsung store for the Core i7-1360P, 16GB LPDDR5 RAM variant.
