

OnePlus 11R

One for the OnePlus fans

The OnePlus 11R takes us back to the times when OnePlus phones in this segment would come packed with powerful hardware and plenty of features, often making them very easy to recommend. For example, the OnePlus 11R offers a flagship-grade chipset, good cameras, a big battery and also fast charging at the above-mentioned aggressive price point. Let's take a deeper look at the device to figure out if it's worth your hard-earned money.

DESIGN

Minus some minute changes, the OnePlus 11R and OnePlus 11 look pretty much identical to the eye. The phone has a balanced heft to it, which makes it feel every bit worth the price being asked for it. Apart from this, we also have the iconic Alert Slider. Overall, it's a tastefully designed device, that definitely gets a recommendation from our end.

DISPLAY

Moving to the front of the phone, it also supports HDR like the OnePlus 11, but unlike the more expensive flagship from the company, it does not get support for Dolby Vision. This panel is covered by a sheet of Dragontrail glass for scratch protection. For brightness, we tested the panel to produce around 800 nits at its peak. For daily use, this is a good number to achieve as it is good enough. As for colour accuracy, testing the panel using Calman Ultimate and Spectral C6 Colourimeter, we found the OnePlus 11 reproducing very accurate colours in the sRGB container where the average DeltaE only slipped to 1.3, while the max also remained well within acceptable levels at 2.4. In the colour check analysis, the average error in colour accuracy was observed to be 3 while the Max DeltaE jumped up to 7. A look at the Grayscale tracking revealed that both the contrast ratio and average

correlated temperature were good, with the latter very close to the perfect 6500 kelvins mark. Another thing of note is that the gamma tracking was also good for the most part.

GAMING AND PERFORMANCE

Underneath the hood, we have the powerful Qualcomm Snapdragon 8+ Gen 1 SoC paired with the high amount of RAM found on both the variants of the device is good enough for any task of daily use. Apps load fast, and switching between them or scrolling between pages is fast and smooth. Benchmark performance is also nothing to complain about, with important ones such as AnTuTu, Geekbench and 3DMark Wild-Life Extreme all clocking good numbers on the phone. Lights on the device are kept on using a 5,000mAh battery, which comes with support for 100W fast wired charging. This ensures the phone can last for over a day on a full charge and when it's out of charge can be charged in barely 25 minutes. However, there is no wireless charging support.

CAMERAS

Keeping with the theme of keeping the experience very close to the OnePlus 11, the OnePlus 11R 5G gets the same main camera as the OnePlus 11 5G. Daytime performance is as expected very good, and the low light shots also come out with rich detail and accurate colours. Shots clicked using the two 8-megapixel ultra-wide and 2-megapixel macro lenses come out with plenty of detail and good dynamic range as well, which is a very important factor for the ultra-wide lens. At the front, we have a 16-megapixel lens, which captures accurate skin tones and thankfully does not kill detail on faces by over-smoothing textures. The low-light performance of this lens is similar. However, it does not get the ability to click selfie portraits at multiple focal lengths as the OnePlus 11 does.

VERDICT

The OnePlus 11R is the phone for OnePlus enthusiasts, which also makes it a very good device for the average buyer looking to get their hands on a fast phone with good cameras and a big battery, but one that still does not force them to break the bank for it. However, if the OnePlus 11R still doesn't feel like the phone for you, then you can always consider devices like the Samsung Galaxy S21 FE which are being offered at a similar price point, and also bring to the table good hardware and decent features.
