

ACER ASPIRE 3

Good, but could have been great!

The Acer Aspire 3 is a budget laptop that provides decent performance for an affordable price. But does it stand up to the expectations set by its competitors? Find out as we delve into the full review of the Acer Aspire 3.

DESIGN

The Acer Aspire 3 laptop boasts a lid that features a silver Acer logo that sits nicely at the centre and has a brushed and slightly textured pattern, which extends to the keyboard deck's interior. The keyboard itself is comfortable to use, with quiet and responsive keys that offer good travel. However, the keyboard deck area doesn't feel very sturdy and moves inward a bit when pressure is applied. The touchpad feels solid enough. It has no dedicated left or right click buttons but it registers every press precisely. The top bezel has an integrated HD webcam, but the video quality is average due to the 640 by 480-pixel resolution. The speakers on this laptop are also decent, at best, and deliver a tinny sound.

PERFORMANCE

While the performance is good enough for everyday computing tasks, the laptop has limitations such as no backlit keyboard, speakers that are not great, and a maximum of 8GB of non-upgradeable LPDDR5 memory. There is also no fingerprint sensor or IR camera for Windows Hello, so users have to sign in using a password, PIN, or third-party security device. The AMD Mendocino chips are dual-core chips, which is enough for 4K video playback and some light gaming or graphics work, but are not enough to handle the latest AAA games at high graphics quality. The Acer Aspire 3 laptop's hardware limitations become apparent when trying to do more ambitious tasks like photos, video, and graphics editing. While the laptop

₹47,990

is not built for gaming, some older games and emulation of older game consoles can run smoothly. The AMD Mendocino processor provides good all-around performance, and the laptop's lightweight design and long battery life make it a great option for on-the-go use.

DISPLAY

The Acer Aspire 3 comes with a 15.6-inch FHD display in a traditional 16:9 aspect ratio. In our testing we found that the laptop has a peak brightness of 230 nits. So if you're planning to use this laptop in indoor conditions you won't face any issues. But if you plan to use the Acer Aspire 3 in an outdoor setting or in a room with a lot of sunlight your experience will be less than optimal.

We also found that the display covers 60% of the sRGB colour spectrum and 44.9% of the DCI-P3 spectrum. Moreover, the laptop's display is not very colour accurate as in our testing we found the average Delta E value to be 12.9, which is not suitable for professional level colour correction.

I/O PORTS AND UPGRADABILITY

Another benefit of the Acer Aspire 3 is

its battery life. With a 37Wh battery, the laptop lasted for around 6.5 hours while browsing the web, document editing and some video streaming. It is a decent amount of battery life, especially considering the laptop's price point. The laptop also has a good selection of ports for a budget device. It includes two USB Type-A ports, one USB Type-C port, an HDMI port, a 3.5mm port jack, and a proprietary charging port.

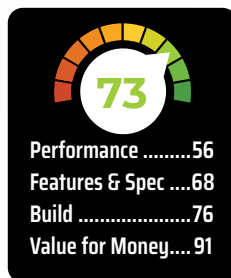

One drawback of the Acer Aspire 3 is its lack of upgradability. The 8GB of LPDDR5 memory is soldered to the motherboard, so you cannot upgrade it. Additionally, the laptop only has one M.2 slot for storage, so you cannot add a second drive. This means that you are stuck with the storage capacity you choose at the time of purchase.

VERDICT

In conclusion, the Acer Aspire 3 is a laptop that is designed to meet the needs

of users who require a device for light computing tasks. If you're looking for a laptop that can handle web browsing, streaming videos, and sending emails, this laptop will serve you well. However, if you need a laptop for gaming or heavy computing tasks, the Acer Aspire 3 may not be the right choice for you. This laptop is particularly suitable for students and office workers who need a device that can handle basic computing tasks.
